The most reliable Microsoft Cybersecurity Architect valid dumps are written [SC-100](#) by our professional experts who have rich experience in this industry for decades, For so many years we keep our standout high-quality SC-100 dumps pdf all the time and we are the best and always being imitated, never exceeding.

It's no worth to spend one penny if it's useless and unprofessional, You just need take the spare time to study SC-100 valid prep pdf, the effects are obvious.

Don't worry, with our SC-100 Study Material, your preparing for the exam will be more efficient and easily, You can imagine how much efforts we put into and how much we attach importance to the performance of our SC-100 study guide.

But we will never be complacent about [Microsoft Cybersecurity Architect](#) our achievements; we will continue to improve the quality of our products.

NEW QUESTION: 1 Which of the CSFB to GSM solutions has the largest delay?
A. PS redirection
B. CCOC
C. PS switching
D. Fast CSFB
Answer: A

NEW QUESTION: 2 **A.** Create the Qualification area-B in CORP BU and select PR BU1.
B. Create the Qualification area-B in CORP BU and select the "Global" check box.
C. Create the Qualification area-A in CORP BU and select the "Global" check box.
D. Create the question in CORP BU and select the "Global" check box.
E. Create the Qualification area-A in PR BU2 and select PR BU3.
Answer: A,C

NEW QUESTION: 3 You have a Microsoft SQL Server 2014 named SRV2014 that has a single tempdb database file. The tempdb database file is eight gigabytes (GB) in size. You install a SQL Server 2016 instance named SQL Server 2016 by using default settings. The new instance has eight logical processor cores. You plan to migrate the databases from SRV2014 to SRV2016. You need to configure the tempdb database on SRV2016. The solution must minimize the number of future tempdb autogrowth events. What should you do?
A. Set the value for the autogrowth setting for the tempdb data file to 128 megabytes (MB). Add seven additional tempdb data files and set the autogrowth value to 128 MB.
B. Increase the size of the tempdb data files to 1 GB.
C. Add seven additional tempdb data files. In the tempdb database, set the value of the MAXDOP property to 8.
D. Increase the size of the tempdb datafile to 8 GB. In the tempdb database, set the value of the MAXDOP property to 8.
Answer: B
Explanation: In an effort to simplify the tempdb configuration experience, SQL Server 2016 setup has been extended to configure various properties for tempdb for multi-processor environments.
1. A new tab dedicated to tempdb has been added to the Database Engine Configuration step of setup workflow.
2. Configuration options:
Data Files* Number of files - this will default to the lower value of 8 or number of logical cores as detected by setup.
* Initial size - is specified in MB and applies to each tempdb data file. This makes it easier to configure all files of same size. Total initial size is the cumulative tempdb data file size (Number of files * Initial Size) that will be created.
* Autogrowth - is specified in MB (fixed growth is preferred as opposed to a non-linear percentage based growth) and applies to each file. The default value of 64MB was chosen to cover one PFS interval.
