Oracle Database compresses data during all DML operations on the table. This form of compression is recommended for OLTP environments.\* When you specify COMPRESS FOR QUERY or COMPRESS FOR ARCHIVE, you enable hybrid columnar compression. With hybrid columnar compression, data can be compressed during bulk load operations. During the load process, data is transformed into a column-oriented format and then compressed. Oracle Database uses a compression algorithm appropriate for the level you specify. In general, the higher the level, the greater the compression ratio.Hybrid columnar compression can result in higher compression ratios, at a greater CPU cost. Therefore, this form

of compression is recommended for data that is not frequently updated.
