NEW QUESTION: 1 Hinweis: Diese Frage ist Teil einer Reihe von Fragen, die dasselbe Szenario darstellen. Jede Frage in der Reihe enthält eine eindeutige Lösung, mit der die angegebenen Ziele erreicht werden können. Einige Fragensätze haben möglicherweise mehr als eine richtige Lösung, während andere möglicherweise keine richtige Lösung haben. Nachdem Sie eine Frage in diesem Abschnitt beantwortet haben, können Sie NICHT mehr darauf zurückkommen. Infolgedessen werden diese Fragen nicht im Überprüfungsbildschirm angezeigt. Sie stellen Microsoft Intune bereit. Sie haben Windows 10-Geräte erfolgreich in Intune registriert. Wenn Sie versuchen, ein iOS-Gerät in Intune zu registrieren, wird eine Fehlermeldung angezeigt. Sie müssen sicherstellen, dass Sie das iOS-Gerät in Intune registrieren können. Lösung: Sie erstellen ein Apple Configurator-Registrierungsprofil. Erfüllt dies das Ziel? **A. Ja B. Nein** **Answer: B**

NEW QUESTION: 2 You are concerned about malicious attachments being transferred to your e-mail server at work through encrypted channels. You want to block these malicious files using your SRX Series device. Which two features should you use in this scenario? (Choose two.) **A. Sky ATP SMTP scanning B. SSL forward proxy C. Sky ATP HTTP scanning D. SSL reverse proxy** **Answer: A, D** Explanation: Explanation Reverse Proxy - is mainly used by server admins to achieve load balancing and high availability. A website may have several web servers behind the reverse proxy.

NEW QUESTION: 3 Which two statements correctly describe ASA resource management in multiple context mode? (Choose two.) **A. The resource limit can only be set as a percentage in the class and not as an absolute value. B. A resource cannot be oversubscribed or set to be unlimited in the class. C. The default class provides unlimited access for all the resources. D. Context belongs to a default class if not assigned to any other class. E. The class sets the resource maximum limit for a context to which it belongs.** **Answer: D, E** Explanation: By default, all security contexts have unlimited access to the resources of the ASA, except where maximum limits per context are enforced; the only exception is VPN resources, which are disabled by default. If you find that one or more contexts use too many resources, and they cause other contexts to be denied connections, for example, then you can configure resource management to limit the use of resources per context. For VPN resources, you must configure resource management to allow any VPN tunnels. All contexts belong to the default class if they are not assigned to another class; you do not have to actively assign a context to the default class. If a context belongs to a class other than the default class, those class settings always override the

default class settings. However, if the other class has any settings that are not defined, then the member context uses the default class for those limits. For example, if you create a class with a 2 percent limit for all concurrent connections, but no other limits, then all other limits are inherited from the default class. Conversely, if you create a class with a limit for all resources, the class uses no settings from the default class.:

http://www.cisco.com/c/en/us/td/docs/security/asa/asa90/configuration/guide/asa_90_cli_config/ha_contexts.html#40167

NEW QUESTION: 4 Which signaling network is normally used between Radio and Core Network?
