**NEW QUESTION: 1**In a social engineering scenario, which of the following will MOST likely reduce the likelihood of an unauthorized individual gaining access to computing resources?**A.** Implementing on-screen masking of passwords**B.** Requiring that passwords be kept strictly confidential**C.** Increasing the frequency of password changes**D.** Conducting periodic security awareness programs**Answer: D****Explanation:**Social engineering can best be mitigated through periodic security awareness training for users who may be the target of such an attempt. Implementing on-screen masking of passwords and increasing the frequency of password changes are desirable, but these will not be effective in reducing the likelihood of a successful social engineering attack. Requiring that passwords be kept secret in security policies is a good control but is not as effective as periodic security awareness programs that will alert users of the dangers posed by social engineering.

### NEW QUESTION: 2

ソリューションアーキテクトは、VPN接続を介してオンプレミスデータセンターに接続するAWSでアプリケーションを設計しています。ソリューションは、VPN経由のネットワークトラフィックをログに記録できる必要があります。

このネットワークトラフィックを記録するサービスはどれですか？**A.** Amazon VPCフローログ**B.** Amazon S3バケットログ**C.** AWS CloudTrailログ**D.** Amazon CloudWatch Logs**Answer: A**

**Explanation:**ExplanationVPC Flow Logs is a feature that enables you to capture information about the IP traffic going to and from network interfaces in your VPC. Flow log data can be published to Amazon CloudWatch Logs and Amazon S3. After you've created a flow log, you can retrieve and view its data in the chosen destination. Refer:

**NEW QUESTION: 3**You work as a network engineer for the company, you want to configure two BGP speakers to form an EBGP session across a firewall. On the engineer's network, the firewall always permits TCP sessions that are initiated from the inside network (the network attached to the inside interface of the firewall). What prerequisite is there for enabling BGP to run on this network?**A.** There is no way to make BGP work across a firewall.**B.** This should work with normal BGP peering, with no additional configuration on the BGP speakers or the firewall.**C.** The BGP protocol port must be opened on the firewall**D.** EBGP multihop will need to be configured for this to work.**Answer: C****Explanation:**If TCP Port 179 is open for BGP than eBGP multihop must also be enabled Because BGP uses unicast TCP packets on port 179 to communicate with its peers, you can configure PIX1 and PIX2 to allow unicast traffic on TCP

port 179. This way, BGP peering can be established between the routers that are connected through the firewall. Redundancy and the desired routing policies can be achieved through the manipulation of the BGP attributes. The neighbor ebgp-multihop command enables BGP to override the default one hop eBGP limit because it changes the Time to Live (TTL) of eBGP packets from the default value of 1 Reference ASA/PIX: BGP through ASA Configuration Example [http://www.cisco.com/en/US/tech/tk365/technologies\\_configuration\\_example09186a008009487d.shtml](http://www.cisco.com/en/US/tech/tk365/technologies_configuration_example09186a008009487d.shtml)
