If you are going to appear in MD-102 Endpoint Administrator exam, and have got less time to prepare for it, then you should try Estruturit.

NEW QUESTION: 1A. SecondaryB. SimpleListDetailsC. DetailsFormTransactionD. Primary
Answer: A,D

NEW QUESTION: 2You have an app named App1 that runs on two Azure virtual machines named VM1 and VM2.You plan to implement an Azure Availability Set for App1. The solution must ensure that App1 is available during planned maintenance of the hardware hosting VM1 and VM2.What should you include in the Availability Set?**A.** two update domains**B.** one update domain**C.** one fault domain**D.** two fault domains**Answer: A****Explanation:**ExplanationThe hardware in a location is divided in to multiple update domains and fault domains. An update domain is a group of VMs and underlying physical hardware that can be rebooted at the same time. VMs in the same fault domain share common storage as well as a common power source and network switch.Microsoft updates, which Microsoft refers to as planned maintenance events, sometimes require that VMs be rebooted to complete the update. To reduce the impact on VMs, the Azure fabric is divided into update domains to ensure that not all VMs are rebooted at the same time.<https://docs.microsoft.com/en-us/azure/virtual-machines/windows/tutorial-availability-sets>

NEW QUESTION: 3Which statement is correct regarding the operation of DHCP?**A.** A DHCP server uses a gratuitous ARP to detect DHCP clients.**B.** If an address conflict is detected, the address is removed from the pool and will not be reused until server is rebooted.**C.** If an address conflict is detected, the address is removed from the pool and an administrator must resolve the conflict.**D.** A DHCP client uses a ping to detect address conflicts.**E.** A DHCP client uses a gratuitous ARP to detect a DHCP server.**F.** If an address conflict is detected, the address removed from the pool for an amount of time configurable by the administrator.**Answer: C**
