**NEW QUESTION: 1**Which feature can you use to monitor traffic on a switch by replicating it to another port or ports on the same switch?**A.** traceroute**B.** the ICMP Echo IP SLAC.**C.** copy run start **D.** SPAN**Answer: D****Explanation:**Explanation: A source port, also called a monitored port, is a switched or routed port that you monitor for network traffic analysis. In a single local SPAN session or RSPAN source session, you can monitor source port traffic, such as received (Rx), transmitted (Tx), or bidirectional (both). The switch supports any number of source ports (up to the maximum number of available ports on the switch) and any number of source VLANs.A source port has these characteristics:\* It can be any port type, such as EtherChannel, Fast Ethernet, Gigabit Ethernet, and so forth.\* It can be monitored in multiple SPAN sessions.\* It cannot be a destination port.\* Each source port can be configured with a direction (ingress, egress, or both) to monitor. For EtherChannel sources, the monitored direction applies to all physical ports in the group.\* Source ports can be in the same or different VLANs.\* For VLAN SPAN sources, all active ports in the source VLAN are included as source ports.

**NEW QUESTION: 2**What is the major difference between the two possible Cisco IM and presence high-availability modes?**A.** Balanced mode provides user load balancing and user failover only for manually generated failovers.Active/standby mode provides an unconfigured standby node in the event of an outage, but it does not provide load balancing.**B.** Balanced mode provides user load balancing and user failover in the event of an outage. Active/standby mode provides an always on standby node in the event of an outage, but it does not provide load balancing.**C.** Balanced mode provides user load failover in the event of an outage. Active/standby mode provides an always on standby node in the event of an outage, and is also provides load balancing.**D.** Balanced mode does not provide user load balancing, but it provides user failover in the event of an outage. Active/standby mode provides an always on

standby node in the event of an outage, but it does not provide load balancing.**Answer: B**
