If you are new to our website, you can ask any questions about our B2B-Solution-Architect study materials, In order to make the user a better experience to the superiority of our B2B-Solution-Architect study materials.

It is acknowledged that there are numerous B2B-Solution-Architect learning questions for candidates for the B2B-Solution-Architect exam, however, it is impossible for you to summarize all of the key points in so many materials by yourself.

There are no additional ads to disturb the user to use the B2B-Solution-Architect learning material, As long as you need help, we will offer instant support to deal with any of your problems about our B2B-Solution-Architect exam questions.

Our B2B-Solution-Architect practice materials may bring far-reaching influence for you, What's more, we will free replace other exam dumps for you in case of B2B-Solution-Architect Salesforce Certified B2B Solution Architect Exam test failure.

NEW QUESTION: 1Note: This question is part of a series of questions that use the same scenario. For your convenience, the scenario is repeated in each question. Each question presents a different goal and answer choices, but the text of the scenario is exactly the same in each question in this series.You have a database named DB1 that contains the following tables: Customer, CustomerToAccountBridge, and CustomerDetails. The three tables are part of the Sales schema. The database also contains a schema named Website. You create the Customer table by running the following Transact-SQL statement:The value of the CustomerStatus column is equal to one for active customers. The value of the Account1Status and Account2Status columns are equal to one for active accounts. The following table displays selected columns and rows from the Customer table.You plan to create a view named Website.Customer and a view named Sales.FemaleCustomers.Website.Customer must meet the following requirements: * Allow users access to the CustomerName and CustomerNumber columns for active customers. * Allow changes to the columns that the view references. Modified data must be visible through the view. * Prevent the view from being published as part of Microsoft SQL Server replication.Sales.Female.Customers must meet the following requirements: * Allow users access to the CustomerName, Address, City, State and PostalCode columns. * Prevent changes to the columns that the view references. * Only allow updates through the views that adhere to the view filter.You have the following stored procedures: spDeleteCustAcctRelationship and spUpdateCustomerSummary.The spUpdateCustomerSummary stored procedure was created by running the following Transact-SQL statement:You run the spUpdateCustomerSummary stored procedure to make changes to customer account summaries.Other stored procedures call the spDeleteCustAcctRelationship to delete records from the CustomerToAccountBridge table. When a procedure calls spDeleteCustAcctRelationship, if the calling stored procedures has already started an active transaction, all the detections made by the spDeleteCustAccRelationship stored procedure must be committed by the caller; otherwise changes must be committed within the spDeleteCustAcctRelationship stored procedure.If any error occurs during the delete operation, only the deletes made by the soDeleteCustACCTRelationships stored procedure must be rolled back and the status must be updated.You need to complete the stored procedure to ensure all the requirements are met. How should you complete the procedure? To answer, drag the Transact-SQL segments to the

correct location. Each transaction-SQL segment may be used once, more than once or not at all. You may need to drag the split bar between panes or scroll to view content. NOTE: Each correct selection is worth one point. **Answer:** Explanation: Explanation Savepoints offer a mechanism to roll back portions of transactions. You create a savepoint using the SAVE TRANSACTION savepoint_name statement. Later, you execute a ROLLBACK TRANSACTION savepoint_name statement to roll back to the savepoint instead of rolling back to the start of the transaction. NEW QUESTION: 2 Two routers are trying to establish an OSPFv3 adjacency over an Ethernet link, but the adjacency is not forming. Which two options are possible reasons that prevent OSPFv3 to form between these two routers? (Choose two.) **A.** mismatch of area types **B.** mismatch of subnet masks **C.** mismatch of network types **D.** mismatch of instance IDs **E.** mismatch of authentication types **Answer: A, D** Explanation: An OSPFv3 interface must have a compatible configuration with a remote interface before the two can be considered neighbors. The two OSPFv3 interfaces must match the following criteria: Hello interval Dead interval Area ID Optional capabilities The OSPFv3 header includes an instance ID field to identify that OSPFv3 packet for a particular OSPFv3 instance. You can assign the OSPFv3 instance. The interface drops all OSPFv3 packets that do not have a matching OSPFv3 instance ID in the packet header. Reference:
