NEW QUESTION: 1CORRECT TEXT A network administrator sets up the DHCP relay on an HP Comware Layer 3 device that forwards IP traffic between the VLANs associated with the wireless SSID with these commands. What must the administrator configure prior to enabling the DHCP relay to the DHCP server on 10.0.0.200 in the interface vlan-interface 100?**Answer:**
Explanation: A

NEW QUESTION: 2 Which of the following concepts is used by digital signatures to ensure integrity of the data?
A. Key escrow
B. Transport encryption
C. Non-repudiation
D. Hashing
Answer: D
Explanation: Most digital signature implementations also use a hash to verify that the message has not been altered, intentionally or accidentally, in transit.
Incorrect Answers: A. Regarding digital security, the cryptographical meaning and application of non-repudiation shifts to mean: A service that provides proof of the integrity and origin of data. An authentication that can be asserted to be genuine with high assurance.
C. Digital signatures are not implemented through transport encryption.
D. Key escrow addresses the possibility that a third party may need to access keys. Under the conditions of key escrow, the keys needed to encrypt/decrypt data are held in an escrow account (think of the term as it relates to home mortgages) and made available if that third party requests them.
