**NEW QUESTION: 1** DRAG DROP You need to implement security according to the business requirements. How should you modify RunLogController? (To answer, drag the appropriate code segment to the correct location or locations. Each code segment may be used once, more than once, or not at all. You may need to drag the split bar between panes or scroll to view content.)  
**Answer:** Explanation: Topic 2, Web Application Background You are developing an online shopping web application. Business Requirements \* A user is not required to provide an email address. If a user enters an email address, it must be verified to be a valid email address. \* Information about the first product on the product page must fade out over time to encourage the user to continue browsing the catalog. \* Administrators must be able to edit information about existing customers. \* Administrators also must be able to specify a default product on the product page. Technical Requirements General: \* The web store application is in a load-balanced web farm. The load balancer is not configured to use server affinity. \* The web store application is an ASP.NET MVC application written in Visual Studio 2012. Products: \* The value of the productId property must always be greater than 0. \* The Products page for mobile devices must display to mobile users. The Products page for desktop devices must display to desktop users. Storage: \* The data must be stored in a serialized XML data format. \* Serialized objects must be schema-independent. Exception handling: \* Exceptions originating from IIS must display a page with support contact information. \* Some page links expire, and users who access these links encounter 404 errors. \* Exceptions must be logged by using the WriteLog method of the Utility class. Browser and device support: \* The application must support image format conversions from .bmp to .jpeg for mobile devices. \* The application must support image format conversions from .bmp to .png for desktop devices. Application Structure
