By default, 0 is the redacted value when Oracle Database performs full redaction (DBMS_REDACT.FULL) on a column of the NUMBER data type. If you want to change it

to another value (for example, 7), then you can run the DBMS_REDACT.UPDATE_FULL_REDACTION_VALUES procedure to modify this value. The modification applies to all of the Data Redaction policies in the current database instance. After you modify a value, you must restart the database for it to take effect. Note: *The DBMS_REDACT package provides an interface to Oracle Data Redaction, which enables you to mask (redact) data that is returned from queries issued by low-privileged users or an application.

*UPDATE_FULL_REDACTION_VALUES Procedure This procedure modifies the default displayed values for a Data Redaction policy for full redaction. *After you create the Data Redaction policy, it is automatically enabled and ready to redact data. *Oracle Data Redaction enables you to mask (redact) data that is returned from queries issued by low-privileged users or applications. You can redact column data by using one of the following methods: /Full redaction. /Partial redaction. /Regular expressions. /Random redaction. /No redaction.
