NEW QUESTION: 1 Which of the following is the BEST practice to ensure that access authorizations are still valid?
A. information owners periodically review the access controls
B. information owner provides authorization for users to gain access
C. An authorization matrix is used to establish validity of access
D. identity management is integrated with human resource processes
Answer: D
Explanation: Personnel and departmental changes can result in authorization creep and can impact the effectiveness of access controls. Many times when personnel leave an organization, or employees are promoted, transferred or demoted, their system access is not fully removed, which increases the risk of unauthorized access. The best practices for ensuring access authorization is still valid is to integrate identity management with human resources processes. When an employee transfers to a different function, access rights are adjusted at the same time.

NEW QUESTION: 3 What is a characteristic of an enterprise flash drive?
A. Performs rotational speed at more than 30000 rpm
B. Writes once and reads many
C. Uses semiconductor-based solid state media
D. Performs data search and retrieval sequentially
Answer: C
Explanation: Enterprise Flash Drives Traditionally, high I/O requirements of an application were met by

simply using more disks. Availability of enterprise class flash drives (EFD) has changed the scenario. Flash drives, also referred as solid state drives (SSDs), are new generation drives that deliver ultra-high performance required by performance-sensitive applications. Flash drives use semiconductor-based solid state memory (flash memory) to store and retrieve data. Unlike conventional mechanical disk drives, flash drives contain no moving parts; therefore, they do not have seek and rotational latencies. Flash drives deliver a high number of IOPS with very low response times. Also, being a semiconductor-based device, flash drives consume less power, compared to mechanical drives. Flash drives are especially suited for applications with small block size and random-read workloads that require consistently low (less than 1 ms) response times. Applications that need to process massive amounts of information quickly, such as currency exchange, electronic trading systems, and real-time data feed processing, benefit from flash drives. Overall, flash drives provide better total cost of ownership (TCO) even though they cost more on \$/GB basis. By implementing flash drives, businesses can meet application performance requirements with far fewer drives (approximately 20 to 30 times less number of drives compared to conventional mechanical drives). This reduction not only provides savings in terms of drive cost, but also translates to savings for power, cooling, and space consumption. Fewer numbers of drives in the environment also means less cost for managing the storage. EMC E10-001 Student Resource Guide. Module 2: Data Center Environment

NEW QUESTION: 4 Which of the following prevents, detects, and corrects errors so that the integrity, availability, and confidentiality of transactions over networks may be maintained? **A.** Communications security management and techniques **B.** Information security management and techniques **C.** Server security management and techniques **D.** Client security management and techniques **Answer: A** Explanation: Communications security and techniques are the best area for addressing this objective. "Information security management and techniques" is incorrect. While the overall information security program would include this objective, communications security is the more specific and better answer. "Client security management and techniques" is incorrect. While client security plays a part in this overall objective, communications security is the more specific and better answer. "Server security management and techniques" is incorrect. While server security plays a part in this overall objective, communications security is the more specific and better answer. References: CBK, p. 408
