Once you receive our emails and open the [Study SPLK-1003 Center](#) installation package, you just need to follow the instruction of the hints.

NEW QUESTION: 1You need to prepare a virtual machine template that meets the VDI requirements.What should you do?**A.** Run sysprep.exe and specify the /audit parameter.**B.** Run dism.exe and specify the /export-image parameter.**C.** Run sysprep.exe and specify the /generalize parameter.**D.** Run dism.exe and specify the /image parameter.**Answer: C**
Explanation:

NEW QUESTION: 2Refer to the exhibit.The device with this configuration is unable to reach network 172.31.31.0/24. The next hop router has been verified to have full connectivity to the network. Which two actions can you take to establish connectivity to the network? (Choose two.)**A.** Modify the existing static route so that the next hop is 0.0.0.0.**B.** Create a static route to 172.16.199.0 using the address of the next hop router.**C.** Create a static route to the loopback address of the next hop router.**D.** Create a default route to the link address of the next hop router.**E.** Create a default route to 172.16.199.9.**F.** Replace the ip default-network command with the ip default-gateway command.**Answer: B,D**Explanation:Explanation/Reference:
Explanation:Unlike the ip default-gateway command, you can use ip default-network when ip routing is enabled on the Cisco router. When you configure ip default-network the router considers routes to that network for installation as the gateway of last resort on the router.For every network configured with ip default-network, if a router has a route to that network, that route is flagged as a candidate default route. However, in this case if the router does not a route to the drfault network of 172.16.199.9, then you would need to ensure that this route exists by creating a static route to172.16.199.0 using the address of the next hop router, or simply create a default route using the address of the next hop router.

NEW QUESTION: 3 Refer to the exhibit. R1 and R2 are connected across and ASA with MD5 authentication. Which statement about eBGP peering between the routers could be true? **A.** eBGP peering will fail because of the TCP random sequence number feature. **B.** eBGP peering will fail because the two routers must be directly connected to allow peering. **C.** eBGP peering will be successful. **D.** eBGP peering will fail because ASA is transit lacks BGP support. **Answer: B**

NEW QUESTION: 4 You are the administrator for a SharePoint Server 2010 Service Pack 1 (SP1) farm that spans the corporate network and perimeter network. Your company network contains Active Directory accounts for employees in the corporate network. The network also includes separate Active Directory accounts for vendors in the perimeter network. You want to prevent the perimeter network from accessing the accounts of employees. You need to design the extranet farm topology. Which type of topology should you use? (Choose the best answer.) **A.** Configure a two-way domain trust. **B.** Configure a one-way domain trust where the perimeter network trusts the corporate network. **C.** Configure a one-way domain trust where the corporate network trusts the perimeter network. **D.** Consolidate the perimeter network and corporate network to use a single Active Directory infrastructure. **Answer: B**
