They are very practical and they have online error correction and [H19-319 V2.0 Valid Guide Files](#) other functions, Our managers can get exam news always from their old friends who are working at kinds of internal company.

24/7 customer assisting, VMware recently announced they will change **Reliable 5V0-23.20 Exam Answers** the exam structure from the end of November, so they will focus a bit more on IaaS and the new ARM rather than old PaaS and classic portal.

NEW QUESTION: 1You need to recommend a configuration for the App Controller portal. The solution must meet the requirements for the planned private cloud infrastructure. What should you include in the recommendation? Case Study Title (Case Study): **A.** Create an App Controller user role. **B.** Configure constrained delegation for the App Controller computer account. **C.** Create an App Controller subscription. **D.** Configure constrained delegation for the VMM computer account. **Answer: B**

NEW QUESTION: 2You are designing a photo-sharing mobile app. The application will store all pictures in a single Amazon S3 bucket. Users will upload pictures from their mobile device directly to Amazon S3 and will be able to view and download their own pictures directly from Amazon S3. You want to configure security to handle potentially millions of users in the most secure manner possible. What should your server-side application do when a new user registers on the photo-sharing mobile application? **A.** Create a set of long-term credentials using AWS Security Token Service with appropriate permissions. Store these credentials in the mobile app and use them to access Amazon S3. **B.** Record the user's information in Amazon DynamoDB. When the user uses their mobile app, create temporary credentials using AWS Security Token Service with appropriate permissions. Store these credentials in the mobile app's memory and use them to access Amazon S3. Generate new credentials the next time the user runs the mobile app. **C.** Create an IAM user. Assign appropriate permissions to the IAM user. Generate an access key and secret key for the IAM user, store them in the mobile app and use these credentials to access Amazon S3. **D.** Create an IAM user. Update the bucket policy with appropriate permissions for the IAM user. Generate an access key and secret key for the IAM user, store them in the mobile app and use these credentials to access Amazon S3. **E.** Record the user's information in Amazon RDS and create a role in IAM with appropriate permissions. When the user uses their mobile app, create temporary credentials using the AWS Security Token Service "AssumeRole" function. Store these credentials in the mobile app's memory and use them to access Amazon S3. Generate new credentials the next time the user runs the mobile app. **Answer: E** Explanation: Explanation We can use either RDS or DynamoDB, however in our given answers, IAM role is mentioned only with RDS, so I would go with Answer B. Question was explicitly focused on security, so IAM with RDS is the best choice.

NEW QUESTION: 3 **HOTSPOT** You need to implement tools at the client's location for monitoring and deploying Azure resources. Which tools should you use? To answer, select the appropriate on-premises tool for each task in the answer area. **Answer:** Explanation: Explanation: * System Center Virtual Machine Manager (SCVMM) enables rapid provisioning of new virtual machines by the administrator and end users using a self-service provisioning tool. * System Center Operations Manager (SCOM) is a cross-platform data center management system for operating systems and hypervisors. It uses a single interface that shows state, health and performance information of computer systems. It also provides alerts generated according to some availability, performance, configuration or security situation being identified. The basic idea is to place a piece of software, an agent, on the computer to be monitored. The agent watches several sources on that computer, including the Windows Event Log, for specific events or alerts generated by the applications executing on the monitored computer. * Scenario: Leverage familiarity with Microsoft server management tools. Manage hosted resources by using on-premises tools. Mitigate the need to purchase additional tools for monitoring and debugging. Use advanced monitoring features and reports of workloads in Azure by using existing Microsoft tools. References: http://en.wikipedia.org/wiki/System_Center_Operations_Manager

NEW QUESTION: 4 Which task should be included in a business continuity plan for a contact center? (There are three correct answers.) **A.** Deliver training on case handling for contingent staff. **B.** Update the case status field values. **C.** Disable the Interactive Voice Response (IVR) system. **D.** Monitor service level agreements (SLAs) and notify customers. **E.** Route cases to agents in an alternate center. **Answer: A,D,E**
