**NEW QUESTION: 2**Scenario: A Citrix Administrator created a Device Collection and a Delivery Group for the Human Resources (HR) and Accounting user groups. The administrator used the XenDesktop Setup Wizard to create the Desktop OS machines and assigned the V: drive as their personal drives. While testing all the new configurations prior to rolling out the Desktop OS machines to the HR user group, the administrator receives an error when attempting to access the V: drive. Users from the Accounting user group do NOT receive the error. Click on the Exhibit button to view the error. How could the administrator resolve this issue? **A.** Run the inventory update on the master image and release the image to the HR user group. **B.** Delete all of the Desktop OS machines and rerun the Streamed VM Setup Wizard to recreate the Desktop OS machines. **C.** Change the V: drive to another drive letter. **D.** Recreate the master image with Personal vDisk and release that image to the HR user group. **Answer: C**

**NEW QUESTION: 3**You want to use AWS CodeDeploy to deploy an application to Amazon EC2 instances running within an Amazon Virtual Private Cloud (VPC). What criterion must be met for this to be possible? **A.** The AWS CodeDeploy agent installed on the Amazon EC2 instances must be able to access the public AWS CodeDeploy and Amazon S3 service endpoints. **B.** The AWS CodeDeploy agent installed on the Amazon EC2 instances must be able to access only the public Amazon S3 service endpoint. **C.** It is not currently possible to use AWS CodeDeploy to deploy an application to Amazon EC2 instances running within an Amazon Virtual Private Cloud (VPC.) **D.** The AWS CodeDeploy agent installed on the Amazon EC2 instances must be able to access only the public AWS CodeDeploy endpoint. **Answer: A**Explanation: You can use AWS CodeDeploy to deploy an application to Amazon EC2 instances running within an Amazon Virtual Private Cloud (VPC). However, the AWS CodeDeploy agent installed on the Amazon EC2 instances must be able to access the public AWS CodeDeploy and Amazon S3 service endpoints. Reference: <http://aws.amazon.com/codedeploy/faqs/>

**NEW QUESTION: 4**A large organization wants to stagger the installation of software updates with computers in different organizational groups by installing the updates on different days. How can an administrator accomplish this without continually creating separate software update policies that target the different organizational groups? **A.** Create clones of the Default Software Update Plug-in Policy and modify the target in each policy **B.** Configure Site Management settings so that each organizational group downloads the software update installation files from a different package server **C.** Configure an automation policy that

periodically disables the Software Update Plug-in by organizational group**D**. Create clones of the Windows Patch Remediation Settings and modify the target in each policy**Answer: B**
