Are you trying to pass the C_THR83_2405 exam to get the longing C_THR83_2405 certification?

NEW QUESTION: 1

あなたはeコマースウェブアプリでユーザークレームにアクセスする必要があります*あなたは最初に何をすべきですか？**A.** eコマースWebアプリケーションからMicrosoft Graph APIを呼び出すためのカスタムコードを作成します。**B.**

リソースマネージャ作成ロール割り当てAPIを使用して、寄稿者RBACロールを電子商取引Webアプリケーションに割り当てます。**C.** Azure

CUを使用すると、eコマースチェックアウトAPIからeコマースWebアプリへのクロスオリジンリソース共有 (CORS) が有効になります。**D.**

HTTPリクエストヘッダー値を読み取るようにeコマースWebアプリを更新します。**Answer: A**

Explanation:ExplanationIf you want more information about the user, you'll need to use the Azure AD Graph API.References:

<https://docs.microsoft.com/en-us/azure/architecture/multitenant-identity/claims>Topic 1, Litware IncCase Study:OverviewThis is a case study. Case studies are not timed separately. You can use as much exam time as you would liketo complete each case. However, there may be additional case studies and sections on this exam. You mustmanage your time to ensure that you are able to complete all questions included on this exam in the timeprovided.To answer the questions included in a case study, you will need to reference infonnation that is provided in thecase study. Case studies might contain exhibits and other resources that provide more information about thescenario that is described in the case study. Each question is independent of the other questions in this casestudy.At the end of this case study, a review screen will appear. This screen allows you to review your answers andto make changes before you move to the next section of the exam. After you begin a new section, you cannotreturn to this section.To start the case studyTo display the first question in this case study, dick the Next button Use the buttons in the left pane to explorethe content of the case study before you answer the questions. Clicking these buttons displays informationsuch as business requirements, existing environment, and problem statements. If the case study has an All Information tab, note that the information displayed is identical to the information displayed on the subsequenttabs. When you are ready to answer a question, click the Question button to return to the question.OverviewBackgroundYou are a developer for Litware Inc., a SaaS company that provides a solution for managing employeexpenses. The solution consists of an

ASP.NET Core Web API project that is deployed as an Azure Web App. Overall architecture Employees upload receipts for the system to process. When processing is complete, the employee receives a summary report email that details the processing results. Employees then use a web application to manage their receipts and perform any additional tasks needed for reimbursement. Receipt processing Employees may upload receipts in two ways: * Uploading using an Azure Files mounted folder * Uploading using the web application Data Storage Receipt and employee information is stored in an Azure SQL database. Documentation Employees are provided with a getting started document when they first use the solution. The documentation includes details on supported operating systems for Azure File upload, and instructions on how to configure the mounted folder. Solution details Users table Web Application You enable MSI for the Web App and configure the Web App to use the security principal name, Processing Processing is performed by an Azure Function that uses version 2 of the Azure Function runtime. Once processing is completed, results are stored in Azure Blob Storage and an Azure SQL database. Then, an email summary is sent to the user with a link to the processing report. The link to the report must remain valid if the email is forwarded to another user. Requirements Receipt processing Concurrent processing of a receipt must be prevented. Logging Azure Application Insights is used for telemetry and logging in both the processor and the web application. The processor also has Trace Writer logging enabled. Application Insights must always contain all log messages. Disaster recovery Regional outage must not impact application availability. All DR operations must not be dependent on application running and must ensure that data in the DR region is up to date. Security Users' SecurityPin must be stored in such a way that access to the database does not allow the viewing of SecurityPins. The web application is the only system that should have access to SecurityPins. All certificates and secrets used to secure data must be stored in Azure Key Vault. You must adhere to the Least Privilege Principal. All access to Azure Storage and Azure SQL database must use the application's Managed Service Identity (MSI). Receipt data must always be encrypted at rest. All data must be protected in transit, User's expense account number must be visible only to logged in users. All other views of the expense account number should include only the last segment, with the remaining parts obscured. In the case of a security breach, access to all summary reports must be revoked without impacting other parts of the system. Issues Upload format issue Employees occasionally report an issue with uploading a receipt using the web application. They report that when they upload a receipt using the Azure File Share, the receipt does not appear in their profile. When this occurs, they delete the file in the file share and use the web application, which returns a 500 Internal Server error page. Capacity issue During busy periods, employees report long delays between the time they upload the receipt and when it appears in the web application. Log capacity issue Developers report that the number of log messages in the trace output for the processor is too high, resulting in lost log messages- Application code Processing.cs Database.cs ReceiptUploader.cs ConfigureSSE.ps1

NEW QUESTION: 2 A technician is reviewing the following log: Which of the following tools should the organization implement to reduce the highest risk identified in this log? **A. DLP B. SIEM C. NIPSD. NGFW Answer: A**
