NEW QUESTION: 1A. Option BB. Option DC. Option CD. Option AAnswer: DExplanation: ExplanationIf you want to allow traffic between two zones, such as between the inside zone (using interfaces facing theinside network) and the outside zone (interfaces facing the Internet or less trusted networks), you must create apolicy for traffic between the two zones, and that is where a zone pair comes into play. A zone pair, which isjust a configuration on the router, is created identifying traffic sourced from a device in one zone and destinedfor a device in the second zone. The administrator then associates a set of rules (the policy) for thisunidirectional zone pair, such as to inspect the traffic, and then applies that policy to the zone pair.Source: Cisco Official Certification Guide, Zones and Why We Need Pairs of Them, p.380
