NEW QUESTION: 1When creation of an EBS snapshot is initiated but not completed the EBS volume?
A. Can be used in read-only mode while the snapshot is in progress
B. Cannot be detached or attached to an EC2 instance until the snapshot completes
C. Cannot be used until the snapshot completes
D. Can be used while the snapshot is in progress
Answer: D
Explanation: Snapshots occur asynchronously; the point-in-time snapshot is created immediately, but the status of the snapshot is pending until the snapshot is complete (when all of the modified blocks have been transferred to Amazon S3), which can take several hours for large initial snapshots or subsequent snapshots where many blocks have changed.

C. 5回のポーリングサイクルで値が75%を超えると、メールを発行します。
D. 問い合わせ可能なSNMP変数を示します。
Answer: B
Explanation: EEM offers the ability to monitor events and take informational or corrective action when the monitored events occur or reach a threshold. An EEM policy is an entity that defines an event and the actions to be taken when that event occurs. There are two types of EEM policies: an applet or a script. An applet is a simple form of policy that is defined within the CLI configuration. To specify the event criteria for an Embedded Event Manager (EEM) applet that is run by sampling Simple Network Management Protocol (SNMP) object identifier values, use the event snmp command in applet configuration mode.
