Redistribution is enabledwhere necessary.R1 is running a BGP AS with a number of 65001. This AS has an eBGP connection to AS65002 in the ISP's network. Because the company's address space is in the private range.R1 is also providing NAT translations between the inside (10.1.0.0/16 & 10.2.0.0/16)networks and outside (209.65.0.0/24) network.ASW1 and ASW2 are layer 2 switches.NTP is enabled on all devices with 209.65.200.226 serving as the master clock source.The client workstations receive their IP address and default gateway via R4's DHCP server.The default gateway address of 10.2.1.254 is the IP address of HSRP group 10 which is running on DSW1 and DSW2.In the IPv6 layer 3 topology R1, R2, and R3 are running OSPFv3 with an OSPF processnumber 6.DSW1, DSW2 and R4 are running RIPng process name RIP\_ZONE.The two IPv6 routing domains, OSPF 6 and RIPng are connected via GRE tunnel runningover the underlying IPv4 OSPF domain. This involved changing the configuration on one or more of the devices. You will be presented with a series of trouble tickets related to issues introduced during these configurations.Note: Although trouble tickets have many similar fault indications, each ticket has its ownissue and solution.Each ticket has 3 sub questions that need to be answered & topology remains same. Question-1 Fault is found on which device, Question-2 Fault condition is related to, Question-3 What exact problem is seen & what needs to be done for solution  
=====  
=====  
SolutionSteps need to follow as below:- Since the problem is raised that DSW1 will not become active router for HSRP group 10- we will check for the HSRP configuration...- From

snapshot we see that the track command given needs to be changed under active VLAN10 router- Change Required: On DSW1, related to HSRP, under vlan 10 change the given track 1 command to instead use the track 10 command.
