Validity & reliable DS0-001 practice dumps guarantee success, As space is limited, we aren't able to write more.

NEW QUESTION: 1 Answer: Explanation:

NEW QUESTION: 2 A technician wants to prevent an unauthorized host from connecting to the network via Ethernet. Which of the following is a Layer 2 access control the technician should implement? **A.** Port security **B.** WPA2 **C.** Captive portal **D.** Access control lists **Answer: A**

NEW QUESTION: 3 **A.** Option **B.** Option **C.** Option **D.** Option **A** **Answer: D** Explanation: One disadvantage of HSRP and VRRP is that only one router is in use, other routers must wait for the primary to fail because they can be used. However, Gateway Load Balancing Protocol (GLBP) can use up to four routers simultaneously. In GLBP, there is still only one virtual IP address but each router has a different virtual MAC address. First a GLBP group must elect an Active Virtual Gateway (AVG). The AVG is responsible for replying ARP requests from hosts/clients. It replies with different virtual MAC addresses that correspond to different routers (known as Active Virtual Forwarders - AVFs) so that clients can send traffic to different routers in that GLBP group (load sharing).
