We are willing to recommend you to try the 3V0-32.23 study materials from our company, Each question and answer of our 3V0-32.23 training questions are researched and verified by the industry experts.

NEW QUESTION: 1 The Acorn Health Plan uses a resource-based relative value scale (RBRVS) to help determine the reimbursement amounts that Acorn should make to providers who are compensated under an FFS system. With regard to the advantages and disadvantages to Acorn of using RBRVS, it can correctly be stated that **A**. A disadvantage of using RBRVS is that it will be difficult for Acorn to track treatment rates for the health plan's quality and cost management functions **B**. An advantage of using RBRVS is that it can assist Acorn in developing reimbursement schedules for various types of providers in a comprehensive healthcare plan **C**. An advantage of using RBRVS is that it puts providers who render more medical services than necessary at financial risk for this overutilization **D**. A disadvantage of using RBRVS is that it rewards procedural healthcare services more than cognitive healthcare services **Answer: B**

NEW QUESTION: 2 どのIP SLAオペレーションで、リモートエンドでIP SLAレスポンスを設定する必要がありますか？ **A**. ICMPエコー **B**. CMPジッタ **C**. TCP接続 **D**. UDPジッタ **Answer: D** Explanation: Cisco IOS IP SLA Responder is a Cisco IOS Software component whose functionality is to respond to Cisco IOS IP SLA request packets. The IP SLA source sends control packets before the operation starts to establish a connection to the responder. Once the control packet is acknowledged, test packets are sent to the responder. The responder inserts a time-stamp when it receives a packet and factors out the destination processing time and adds time-stamps to the sent packets. This feature allows the calculation of unidirectional packet loss, latency, and jitter measurements with the kind of accuracy that is not possible with ping or other dedicated probe testing. Reference: 0aecd806bfb52.html The IP SLAs responder is a component embedded in the destination Cisco device that allows the system to anticipate and respond to IP SLAs request packets. The responder provides accurate measurements without the need for dedicated probes. 2/46sg/configuration/guide/Wrapper-46SG/swipsla.html UDP Jitter measures the delay, delay variation (jitter), corruption, misordering and packet loss by generating periodic UDP traffic. This operation always requires IP SLA responder.

NEW QUESTION: 3 Your network contains an Active Directory domain named contoso.com. The domain contains a server named Server1. Server1 runs Windows Server 2012 R2. On Server1, you create a printer named Printer1. You share Printer1 and publish Printer1 in Active Directory. You need to provide a group named Group1 with the ability to manage Printer1. What should you do? **A**. From Print Management, configure the Security settings of Printer1. **B**. From Print Management, configure the Advanced settings of Printer1. **C**. From Print Management, configure the Sharing settings of Printer1. **D**. From Active Directory Users and Computers, configure the Security settings of Server1 Printer1. **Answer: A** Explanation: If you navigate to the Security tab of the Print Server Properties you will find the Permissions that you can set to Allow which will provide Group1 with the ability to manage Printer1. Set permissions for print servers- Open Print Management. In the left pane, click Print Servers, right-click the applicable

print server and then click Properties. On the Security tab, under Group or users names, click a user or group for which you want to set permissions. Under Permissions for <user or group name>, select the Allow or Deny check boxes for the permissions listed as needed. To edit Special permissions, click Advanced. On the Permissionstab, click a user group, and then click Edit. In the Permission Entry dialog box, select the Allow or Deny check boxes for the permissions that you want to edit.
