Considerable services for clients.

NEW QUESTION: 1Your network contains client computers that run Windows 8 Enterprise. The computers are members of an Active Directory domain. Your company purchases a subscription to Windows Intune. Synchronization between Active Directory and Windows Intune is not configured. You enroll all of the computers in Windows Intune. You plan to create groups that contain the computers by using dynamic membership. You need to identify which criteria you can use to populate the groups dynamically. Which three criteria should you identify? (Each correct answer presents a complete solution. Choose three.)
A. domain
B. organizational unit (OU)
C. manager
D. security group
E. device type
Answer: B,C,D
Explanation: Windows Intune Dynamic membership query criteria include: Security group Manager Organizational unit (OU)
Note: *A group can have direct members (static membership), dynamic query-based members, or both. When you create a dynamic membership query, you define the criteria that determines the query that Windows Intune runs to retrieve the list of group members. The group is automatically updated with members that meet the criteria whenever changes occur. You can also create groups that have static membership lists. These are groups that you manually define by explicitly adding members. *Windows Intune is a Microsoft cloud-based management solution. Intune is primarily aimed at small and medium enterprises and service providers who want to manage up to 500 Microsoft Windows computers. Distribution is through a subscription system in which a fixed monthly cost is incurred per PC. The minimum subscription duration is one year. Included in the package is the Windows operating system, currently Windows 8 Enterprise. <http://technet.microsoft.com/en-us/library/hh456367.aspx>

NEW QUESTION: 2A server administrator is integrating HPE OneView authentication with Active Directory and needs to add read-only access to members of a domain group. Which steps

are part of the procedure? (Choose two.)**A.** Define the Active Directory domain and associated directory server(s) in Directory settings.**B.** Add the domain group as Organization Unit in Directory settings.**C.** Add the domain group in Users and Groups menu.**D.** Add the domain group as Base DN in Directory settings.**E.** Add the Active directory server in Users and Groups menu.**Answer: A,E**

NEW QUESTION: 3 Click to expand each objective. To connect to the Azure portal, type <https://portal.azure.com> in the browser address bar. When you are finished performing all the tasks, click the 'Next' button. Note that you cannot return to the lab once you click the 'Next' button. Scoring occurs in the background while you complete the rest of the exam. Overview The following section of the exam is a lab. In this section, you will perform a set of tasks in a live environment. While most functionality will be available to you as it would be in a live environment, some functionality (e.g., copy and paste, ability to navigate to external websites) will not be possible by design. Scoring is based on the outcome of performing the tasks stated in the lab. In other words, it doesn't matter how you accomplish the task, if you successfully perform it, you will earn credit for that task. Labs are not timed separately, and this exam may have more than one lab that you must complete. You can use as much time as you would like to complete each lab. But, you should manage your time appropriately to ensure that you are able to complete the lab(s) and all other sections of the exam in the time provided. Please note that once you submit your work by clicking the Next button within a lab, you will NOT be able to return to the lab. To start the lab You may start the lab by clicking the Next button. You plan to deploy several Azure virtual machines and to connect them to a virtual network named VNET1007. You need to ensure that future virtual machines on VNET1007 can register their name in an internal DNS zone named corp8548984.com. The zone must What should you do from Azure Cloud Shell?**Answer:** Explanation: To complete this task, start Azure Cloud Shell and select PowerShell (Linux), Click Show Advanced settings, and then enter corp8548984n1 in the Storage account text box and File1 share text box. Click Create storage, and then complete the task. See solution below. Explanation Step 1: Launch Cloud Shell from the top navigation of the Azure portal. Step 2: Select PowerShell When you start the Azure Cloud Shell for the first time, you will be prompted to create a storage account in order to associate a new Azure File Share to persist files across sessions. Step 3: Click Show Advanced settings. Step 4: Enter corp8548984n1 in the Storage account text box and File1 share text box. Click Create storage. Step 5: Enter the following command at the powershell command prompt: `New-AzDnsZone -Name "corp8548984.com" -ResourceGroupName "mycloudshell" -ZoneType Private -RegistrationVirtualNetworkId VNET1007` Note: A DNS zone is created by using the `New-AzDnsZone` cmdlet with a value of `Private` for the `ZoneType` parameter. References: <https://docs.microsoft.com/en-us/azure/dns/private-dns-getstarted-powershell> <https://docs.microsoft.com/en-us/azure/cloud-shell/quickstart-powershell> <https://docs.microsoft.com/en-us/powershell/module/az.dns/new-azdnszone?view=azps-1.5.0>

NEW QUESTION: 4 How can you ensure that a consistent database status is saved using data snapshots? Please choose the correct answer.**A.** Create a fullback snapshot.**B.** Trigger a save point.**C.** Execute the `hdbbackupdiag` tool.**D.** Create an internal database snapshot.**Answer: D**
