You can feel exam pace and hold time to test with our DEA-7TT2 practice questions, We provide you with free demo for you to have a try before buying DEA-7TT2 exam braindumps, so that you can know what the complete version is like.

NEW QUESTION: 1Note: This question is part of a series of questions that use the same scenario. For your convenience, the scenario is repeated in each question. Each question presents a different goal and answer choices, but the text of the scenario is exactly the same in each question In the series.Start of repeated scenarioContoso. Ltd. has a Microsoft SQL Server environment that includes SQL Server Integration Services (SSIS), a data warehouse, and SQL Server Analysis Services (SSAS) Tabular and multidimensional models.The data warehouse stores data related to your company sales, financial transactions and financial budgets. All data for the data warehousse originates from the company's business financial system.The data warehouse includes the following tables:The company plans to use Microsoft Azure to store older records from the data warehouse. You must modify the database to enable the Stretch Database capability.Users report that they are becoming confused about which city table to use for various queries. You plan to create a new schema named Dimension and change the name of the dbo.du_city table to Diamension.city. Data loss is not permissible, and you must not leave traces of the old table in the data warehouse.Pal to create a measure that calculates the profit margin based on the existing measures.You must implement a partitioning scheme few the fact. Transaction table to move older data to less expensive storage. Each partition will store data for a single calendar year, as shown in the exhibit (Click the Exhibit button.) You must align the partitions.You must improve performance for queries against the fact.Transaction table. You must implement appropriate indexes and enable the Stretch Database capability.End of repeated scenarioYou need to resolve the problems reported about the dia__city table.How should you complete the Transact-SQL statement? To answer, drag the appropriate Transact-SQL segments to the correct locations. Each Transact-SQL segment may be used once, more than once, or not at all. You may need to drag the split bar between panes or scroll to view content.**Answer:** Explanation:

NEW QUESTION: 2A. Option B**B.** Option C**C.** Option A**Answer: C**Explanation:ExplanationDenial of service refers to willful attempts to disrupt legitimate users from getting access to the resources theyintend to. Although no complete solution exists, administrators can do specific things to protect the networkfrom a DoS attack and to lessen its effects and prevent a would-be attacker from using a system as a source ofan attack directed at other systems. These mitigation techniques include filtering based on bogus source IPaddresses trying to come into the networks and vice versa. Unicast reverse path verification is one way toassist with this, as

are access lists. Unicast reverse path verification looks at the source IP address as it comes into an interface, and then looks at the routing table. If the source address seen would not be reachable out of the same interface it is coming in on, the packet is considered bad, potentially spoofed, and is dropped.
