NEW QUESTION: 1A. Option AB. Option CC. Option BD. Option D**Answer: C**

NEW QUESTION: 2Which component of UPS5000-E support hot swappable**A.** Energy control module**B.** Dry contact card**C.** Bypass module**D.** Power module**Answer: A,B,C,D**

NEW QUESTION: 3An insurance company is storing critical financial data in the OCI block volume. This volume is currently encrypted using oracle managed keys. Due to regulatory compliance, the customer wants to encrypt the data using the keys that they can control and not the keys which are controlled by Oracle.What of the following series of tasks are required to encrypt the block volume using customer managed keys?**A.** Create a vault, create a master encryption key in the vault, assign this master encryption key to the block volume**B.** Create a master encryption key, create a data encryption key, decrypt the block volume using existing oracle managed keys, encrypt the block volume using the data encryption key**C.** Create a vault, import your master encryption key into the vault, generate data encryption key, assign data encryption key to the block volume**D.** Create a master encryption key, create a new version of the encryption key, decrypt the block volume using existing oracle managed keys and encrypt using new version of the encryption key**Answer: A****Explanation:**ExplanationOracle Cloud Infrastructure Vault lets you centrally manage the encryption keys that protect your data and the secret credentials that you use to securely access resources. You can use the Vault service to create and manage the following resources:Vaults Keys SecretsVaults securely store master encryption keys and secrets that you might otherwise store in configuration files or in code.The Vault service lets you create vaults in your tenancy as containers for encryption keys and secrets. If needed, a virtual private vault provides you with a dedicated partition in a hardware security module (HSM), offering a level of storage isolation for encryption keys that's effectively equivalent to a virtual independent HSM.

NEW QUESTION: 4You are asked to manage the oversubscription ratio of your spine and leaf IP fabric. You determine that you are at a 3:1 ratio of downstream to upstream traffic and must achieve a 1:1 ratio.In this scenario, which two actions would you take to achieve this goal? (Choose two.)**A.** Reduce the number of leaf nodes in your design.**B.** Reduce the number of server-facing ports that each leaf node uses to carry traffic.**C.** Increase the number of spine nodes in your design.**D.** Increase the number of server-facing ports that each leaf node uses to carry traffic.**Answer: B,C**
