NEW QUESTION: 1Note: This question is part of a series of questions that use the same scenario. For your convenience, the scenario is repeated in each question. Each question presents a different goal and answer choices, but the text of the scenario is exactly the same in each question in this series.
Start of repeated scenario.
Your network contains an Active directory forest named adatum.com. All client computers run Windows 10 Enterprise. All the computers are named by using the name of their respective department and an incremental three-digit number. For example, the first computer in the sales department is named Sales001. Several managers use tablets that run Windows 10 and have 3 GB of RAM. All other client computers have at least 8 GB RAM. Adatum.com is synchronized to Microsoft Azure Active Directory. Your company implements the Microsoft Store for Business. You have a deployment of System Center Configuration Manager (Current Branch) that has discovery configured. All the client computers have the Configuration Manager client installed. The company uses the applications shown in the following table. The company identifies the following requirements for software deployments:
View the Upgrade Readiness data of all the client computers.
Deploy App1 to the client computers in the marketing department.
Deploy App2 to the client computers in the human resources (HR) department.
Monitor the usage of App3.
Deploy SalesAppLite to sales department computers that have 3 GB of RAM or less.
Deploy SalesAppFull to sales department computers that have more than 3 GB of RAM.
