**NEW QUESTION: 1** During backlog refinement meeting, the new developer on the team asks the product owner to discuss a new performance threshold requirement and how it impacts the stories in the backlog. What should the team do? **A.** Create a spike story to analyze the impact of the threshold requirement on current stories **B.** Add this threshold requirement request as acceptance criteria in all impacted stories **C.** Conduct design planning session to review the performance threshold requirement **D.** Identify the tasks for the new performance threshold requirement **Answer: A**

**NEW QUESTION: 2** In a VPN that uses certificate-based authentication, which component must be configured on the MobilityMaster (MM) to allow a RAP to successfully connect to a Mobility Controller (MC)? **A.** RAP IPsec pre-shared key **B.** RAP VPN username and password **C.** WLAN and new RAP group **D.** RAP whitelist **Answer: D**

**NEW QUESTION: 3** You have an Office 365 tenant that uses an Enterprise E3 subscription. You have two servers in a perimeter network that have the Active Directory Federation Services (AD FS) proxy role service installed. A federation server farm is located behind a firewall. You need to ensure that the AD FS proxies can communicate with the federation server farm. Which two name resolution strategies can you use? Each correct answer presents a complete solution. **A.** LMHOSTS file on the federation servers **B.** HOSTS file on the federation servers **C.** LMHOSTS file on the proxy servers **D.** DNS server in the perimeter network **E.** HOSTS file on the proxy servers **Answer: D, E** Explanation: Explanation/Reference: Explanation: Configure Name Resolution for a Federation Server Proxy in a DNS Zone That Serves Only the Perimeter Network So that name resolution can work successfully for a federation server in an Active Directory Federation Services (AD FS) scenario in which one or more Domain Name System (DNS) zones serve only the perimeter network, the following tasks must be completed: The hosts file on the federation server proxy must be updated to add the IP address of a federationserver. DNS in the perimeter network must be configured to resolve all client requests for the AD FS host name to the federation server proxy. To do this, you add a host (A) resource record to perimeter DNS for the federation server proxy.

**NEW QUESTION: 4** 당신 S3 버킷 (<http://demo.s3-website-us-east-l.amazonaws.com>)에서 웹

사이트 호스팅을 통해 웹 사이트를 호스팅하고 있습니다. 웹 사이트 호스팅도 활성화 된 다른 버킷의 리소스에 액세스하는 Javascript를 사용하는 일부 웹 페이지가 있습니다. 그러나 사용자가 웹 페이지에 액세스하면 차단 된 Javascript 오류가 발생합니다. 이것을 어떻게 교정 할 수 있습니까? 선택 해주세요: **A.** 버킷에 CRR 활성화 **B.** 버킷에 CORS 활성화 **C.** 버킷의 버전 관리 활성화 **D.** 버킷에 MFA를 사용하도록 설정 **Answer: B**

**Explanation:** Your answer is incorrect Answer-A Such a scenario is also given in the AWS Documentation Cross-Origin Resource Sharing: Use-case Scenarios The following are example scenarios for using CORS: \* Scenario 1: Suppose that you are hosting a website in an Amazon S3 bucket named website as described in Hosting a Static Website on Amazon S3. Your users load the website endpoint <http://website.s3-website-us-east-1.amazonaws.com>. Now you want to use JavaScript on the webpages that are stored in this bucket to be able to make authenticated GET and PUT requests against the same bucket by using the Amazon S3 API endpoint for the bucket [website.s3.amazonaws.com](http://website.s3.amazonaws.com). A browser would normally block JavaScript from allowing those requests, but with CORS you can configure your bucket to explicitly enable cross-origin requests from [website.s3-website-us-east-1.amazonaws.com](http://website.s3-website-us-east-1.amazonaws.com). \* Scenario 2: Suppose that you want to host a web font from your S3 bucket. Again, browsers require a CORS check (also called a preflight check) for loading web fonts. You would configure the bucket that is hosting the web font to allow any origin to make these requests. Option B is invalid because versioning is only to create multiple versions of an object and can help in accidental deletion of objects Option C is invalid because this is used as an extra measure of caution for deletion of objects Option D is invalid because this is used for Cross region replication of objects For more information on Cross Origin Resource sharing, please visit the following URL \* <https://docs.aws.amazon.com/AmazonS3/latest/dev/cors.html> The correct answer is: Enable CORS for the bucket Submit your Feedback/Queries to our Experts
