the big chance for your best selection for your future, This is the [Sample HPE2-T37 Questions](#) same as you have run it already at the first time you take it with the internet.

There is always a suitable one for you, So our 100-160 exam questions have active demands than others with high passing rate of 98 to 100 percent.

NEW QUESTION: 1 Which sequence describes the procedures for hot-adding an additional expansion enclosure to an existing E-Series configuration? (Choose the best answer.)
A. Add one ESM cable between it and another available expansion port, disrupt the other SAS connection to add second cable, check SANtricity for addition of the new enclosure, power on expansion enclosure.
B. Add one ESM cable between it and another available expansion port, disrupt the other SAS connection to add second cable, power on expansion enclosure, check SANtricity for addition of the new enclosure.
C. Power on expansion enclosure, add one ESM cable between it and another available expansion port, check SANtricity for addition of the new enclosure, disrupt the other SAS connection to add second cable.
D. Power on expansion enclosure, add one ESM cable between it and another available expansion port, disrupt the other SAS connection to add second cable, check SANtricity for addition of the new enclosure.
Answer: A

NEW QUESTION: 2 DRAG DROP You are developing an ASP.NET MVC application that has pages for users who browse the site with Windows Phone 7. The pages for Windows Phone 7 include the following files: You need to update the application so that it renders the customized files correctly to Windows Phone 7 users. How should you update the Application_Start method? (To answer, drag the appropriate line of code to the correct location or locations. Each line of code may be used once, more than once, or not at all. You may need to drag the split bar between panes or scroll to view content.)
Answer: Explanation: Explanation

NEW QUESTION: 3 An accountant at a small business is trying to understand the value of a server to determine if the business can afford to buy another server for DR. The risk manager only provided the accountant with the SLE of \$24,000, ARO of 20% and the exposure factor of 25%. Which of the following is the correct asset value calculated by the accountant?
A. \$4,800
B. \$24,000
C. \$96,000
D. \$120,000
Answer: C Explanation: Explanation
The annualized loss expectancy (ALE) is the product of the annual rate of occurrence (ARO) and the single loss expectancy (SLE). It is mathematically expressed as: $ALE = ARO \times SLE$
Single Loss Expectancy (SLE) is mathematically expressed as: $Asset\ value\ (AV) \times Exposure\ Factor\ (EF)$
Thus if $SLE = \$24,000$ and $EF = 25\%$ then the Asset value is $SLE/EF = \$96,000$
