Answer: C,FExplanation:By default, the reference bandwidth used in Cisco routers is

100Mbps, so Gigabit Ethernet and above will have a cost of 1, so a gigabit interface and 10GE

interface will be equal with a Gigabit Ethernet. This is not ideal. If we change the reference

bandwidth to 100000 then the faster link will be used. Changing the reference bandwidth

needs to be done on all routers in the OSPF network.Increasing the cost on the R1-R3 link will

also cause the traffic to take the more direct route.
