NEW QUESTION: 1You have a SQL database that contains a table named Products.You are implementing a stored procedure that retrieves the list of products, performs custom business logic and then retrieve the list of products again.The custom business logic in the stored procedure does not modify data from the Products table.The stored procedure contains the following:You need to complete line 01 of the stored procedure to ensure that when the transaction occurs, the data read from the SELECT * FROM Products statement on line 05 is identical to the data read from the SELECT * FROM Products statement on line 10. The solution must maximize concurrency.Part of the correct Transact-SQL has been provided in the answer area below. Enter the code in the answer area that resolves the problem and meets the stated goals or requirements. You can add code within the code that has been provided as well as below it.Use the Check Syntax button to verify your work. Any syntax or spelling errors will be reported by line and character position.**Answer:** Explanation:REPEATABLE READExplanation: Add REPEATABLE READ to line 1 to get:SET TRANSACTIONISOLATION LEVEL REPEATABLE READ; REPEATABLE READ specifies that statements cannot read data that has been modified but not yet committed by other transactions and that no other transactions can modify data that has been read by the current transaction until the current transaction completes.

NEW QUESTION: 2Part 2: "Test Analyst various"One limitation of pairwise testing is that it ...**A.** finds defects in clusters of functionality**B.** produces all combinations of tests**C.** may not produce the most commonly used combinations**D.** is only suitable for testing boundaries
Answer: C

NEW QUESTION: 3What are the three basic security objects that are created and maintained in the Security tab of the Informatica Administrator?**A.** Users, Groups, Folders**B.** Users, Groups,

Privileges**C.** Users, Groups, Roles**D.** Users, Groups. Permissions**Answer: C**Explanation:
