While, there are limited C-HAMOD-2404 practice vce torrent and few professional guide in the real market.

NEW QUESTION: 1A. Option DB. Option BC. Option AD. Option C Answer: A,C

NEW QUESTION: 2Is the following description about Kubernetes wrong?**Answer:** Explanation: Kubernetes is Google's open source container cluster management system, built on Docker technology B, Kubernetes cannot manage the life cycle of the container

NEW QUESTION: 3The Orders form is a master-detail form in which ORDERS is a single-record master block and ORDER_ITEMS is a multirecord detail block. During testing of the Orders form, users have complained about the behavior of Enter-Query mode. In the form they are testing, they are unable to navigate out of the current block while they are in Enter-Query mode. However, they would like to be able to carry out the following procedure: 1 . Press [Enter Query] while in the master block. 2 . Enter some search criteria. 3 . Navigate to the detail block. 4 . Enter more search criteria (while the form is still in Enter-Query mode). 5 . Press [Execute Query] to have the criteria applied to both blocks at once. How can you provide the requested functionality? **A.** Use a Key-Entqry trigger on the master block to redirect the focus to the detail block after the search criteria have been entered in the master block. **B.** The requested functionality is the default behavior. You simply need to remove or rewrite the triggers you wrote that "broke" the form. **C.** Use a Key-Nxtblk trigger on the ORDERS block to cause navigation to the ORDER_ITEMS block. This will work because Key triggers can fire in Enter-Query mode and can call restricted built-ins such as GO_BLOCK(). **D.** Use a combination of Key-Entqry and Key-Exeqry triggers at form level to call generically written procedures to test where the current focus is and set global variables that a form-level Key-Nxtblk trigger can use to redirect the focus. **E.** You cannot perform the requested operation with a master-detail form. The restriction on navigating out of the current block during Enter-Query mode cannot be circumvented. **F.** Use a Key-Exeqry trigger on both the master and detail blocks to call a centralized procedure and have the procedure handle the navigation. **Answer: E**
