NEW QUESTION: 2Which two are features of IPv6? (Choose two.)**A.** broadcast**B.** allcast**C.** podcast**D.** anycast**E.** multicast**Answer: D,E**Explanation:IPv6 addresses are classified by the primary addressing and routing methodologies common in networking: unicast addressing, anycast addressing, and multicast addressing. - A unicast address identifies a single network interface. The Internet Protocol delivers packets sent to a unicast address to that specific interface. - An anycast address is assigned to a group of interfaces, usually belonging to different nodes. A packet sent to an anycast address is delivered to just one of the member interfaces, typically the nearest host, according to the routing protocol's definition of distance. Anycast addresses cannot be identified easily, they have the same format as unicast addresses, and differ only by their presence in the network at multiple points. Almost any unicast address can be employed as an anycast address. - A multicast address is also used by multiple hosts, which acquire the multicast address destination by participating in the multicast distribution protocol among the network routers. A packet that is sent to a multicast address is delivered to all interfaces that have joined the corresponding multicast group.

NEW QUESTION: 3

プロジェクトの完了時に、交渉を通じて顧客の合意が得られない場合、プロジェクトマネージャーは次に何をすべきですか？**A.** プロジェクトチームメンバーに通知する**B.** 調停を探索します。**C.** すべての作業が完了したため、訴訟を起こします。**D.** クロージングフェーズを開始します。
