NEW QUESTION: 1 Scenario: A Citrix Architect is designing a new Citrix Virtual Apps and Desktops environment. The customer previously installed all applications locally on managed laptops and desktops but is willing to evaluate other application delivery methods as part of the new deployment. The environment will be standardized on Windows 10 and Windows Server 2016 for the Virtual Delivery Agent (VDA) machines. As part of an application analysis performed earlier in the project, the information in the exhibit was collected regarding 1 of the required applications. Click the Exhibit button to view the information. The customer has the additional objective of minimizing the amount of network traffic in the environment, particularly on WAN or metered links. How should the architect deploy the application?
A. Install it directly on endpoint devices, and include it in a virtual desktop session using the Local App Access feature
B. Install it directly on a Server OS VDA machine, and access it from the endpoint as a published application
C. Install it in the Application Layer using Citrix App Layering
D. Stream it to a VDA machine using Microsoft App-V, and access it through a virtual desktop session
E. Install it directly on a VDA machine image, and access it through a virtual desktop session
Answer: E
