**NEW QUESTION: 1** A customer is preparing to deploy a wireless network in a stadium and is identifying coverage area requirement for the patrons in suite areas. Which two attributes are relevant to determining these coverage requirements? (Choose two.) **A.** encryption type **B.** authentication type **C.** number of uses **D.** device types **E.** hours' d operon **Answer: B,D**

**NEW QUESTION: 2** Which two statements about a wireless access point configured with the guest-mode command are true? (Choose two) **A.** It allows clients configured without SSIDs to associate. **B.** It allows associated clients to transmit packets using its SSID. **C.** It supports associations by clients that perform passive scans. **D.** It can support more than one guest-mode SSID. **E.** If one device on a network is configure in guest-mode, clients can use the guest-mode SSID to connect to any device in the same network. **Answer: A,C**

**NEW QUESTION: 3** \_\_\_\_\_ refers to the "degree to which individuals and groups are able to obtain needed services." **A.** Access **B.** Responsiveness to patient preferences **C.** Equity **D.** Amenities **Answer: A**

**NEW QUESTION: 4** 文章を完成させるには、回答領域で適切なオプションを選択してください。  
**Answer:** Explanation: Explanation Azure storage offers different access tiers: hot, cool and archive. The archive access tier has the lowest storage cost. But it has higher data retrieval costs compared to the hot and cool tiers. Data in the archive tier can take several hours to retrieve. While a blob is in archive storage, the blob data is offline and can't be read, overwritten, or modified. To read or download a blob in archive, you must first rehydrate it to an online tier. Example usage scenarios for the archive access tier include: Long-term backup, secondary backup, and archival datasets Original (raw) data that must be preserved, even after it has been processed into final usable form. Compliance and archival data that needs to be stored for a long time and is hardly ever accessed.
