Helping you pass the MB-330 : Microsoft Dynamics 365 Supply Chain Management Functional Consultant test study guide at your first attempt is what we are desired and confident to achieve.

**NEW QUESTION: 1**Your on-premises network contains an Active Directory domain named adatum.com that is synced to Azure Active Directory (Azure AD). Password writeback is disabled. In adatum.com, you create the users shown in the following table. Which users must sign in from a computer joined to adatum.com?  
**A.** User1 only  
**B.** User2 and User3 only  
**C.** User2 only  
**D.** User1 and User3 only  
**E.** User1, User2, and User3  
**Answer: A**  
**Explanation:** Explanation Password writeback is a feature enabled with Azure AD Connect that allows password changes in the cloud to be written back to an existing on-premises directory in real time. References: <https://docs.microsoft.com/en-us/azure/active-directory/authentication/concept-sspr-writeback>

#### **NEW QUESTION: 2**

脅威を緩和する手法を左側から、脅威の種類または攻撃を軽減する攻撃の右側にドラッグアンドドロップします。  
**Answer:** Explanation: Explanation Double-Tagging attack: In this attack, the attacking computer generates frames with two 802.1Q tags. The first tag matches the native VLAN of the trunk port (VLAN 10 in this case), and the second matches the VLAN of a host it wants to attack (VLAN 20). When the packet from the attacker reaches Switch A, Switch A only sees the first VLAN 10 and it matches with its native VLAN 10 so this VLAN tag is removed. Switch A forwards the frame out all links with the same native VLAN 10. Switch B receives the frame with an tag of VLAN 20 so it removes this tag and forwards out to the Victim computer. Note: This attack only works if the trunk (between two switches) has the same native VLAN as the attacker. To mitigate this type of attack, you can use VLAN access control lists (VACLs, which applies to all traffic within a VLAN. We can use VACL to drop attacker traffic to specific victims/servers) or implement Private VLANs. ARP attack (like ARP poisoning/spoofing) is a type of attack in which a malicious actor sends falsified ARP messages over a local area network as ARP allows a gratuitous reply from a host even if an ARP request was not received. This results in the linking of an attacker's MAC address with the IP address of a legitimate computer or server on the network. This is an attack based on ARP which is at Layer 2. Dynamic ARP inspection (DAI) is a security feature that validates ARP packets in a network which can be used to mitigate this type of attack.

**NEW QUESTION: 3** Which of the following port accesses the NetEco1000S server through the

browser? (Multiple choice)**A. 0B. 1C. 2D. 3Answer: C,D**

**NEW QUESTION: 4**Minimum standards for securing the technical infrastructure should be defined in a security:**A. strategy.B. model.C. architecture.D. guidelines.Answer: C****Explanation:** Explanation/Reference:Explanation:Minimum standards for securing the technical infrastructure should be defined in a security architecture document. This document defines how components are secured and the security services that should be in place. A strategy is a broad, high-level document. A guideline is advisory in nature, while a security model shows the relationships between components.
