NEW QUESTION: 3ホットスポットの質問

CustomerAnalysisデータモデルの展開時間を最小限に抑えるために、プロジェクトオプション設定を構成する必要があります。

あなたは何をすべきか？回答するには、回答領域の各リストから適切な設定を選択します。

Answer: Explanation:Explanation:Scenario:Box 1, Processing option:DefaultProcess Default detects the process state of database objects, and performs processing necessary to deliver unprocessed or partially processed objects to a fully processed state. If you change a data binding, Process Default will do a Process Full on the affected object.Note: Processing Method This setting controls whether the deployed objects are processed after deployment and the type of processing that will be performed. There are three processing options:Default processing (default)Full processingNoneBox 2, Transactional deployment: Falsel self this option is False, Analysis Services deploys the metadata changes in a single transaction, and deploys each processing command in its own transaction.Scenario: The CustomerAnalysis data model will contain a large amount of data and needs to be shared with other developers even if a deployment fails. Each time you deploy a change during development, processing takes a long time.

<https://docs.microsoft.com/en-us/sql/analysis-services/multidimensional-models/deployment-script-files-specifying-processing-options> Topic 2, BackgroundWide World Importers imports and sells clothing. The company has a multidimensional Microsoft SQL Server Analysis Services instance. The server has 80 gigabytes (GB) of available physical memory. The following installed services are running on the server: * SQL Server Database Engine* SQL Server Analysis Services (multidimensional)The database engine instance has been configured for a hard cap of 50 GB, and it cannot be lowered. The instance contains the following cubes: SalesAnalysis, OrderAnalysis.Reports that are generated based on data from the OrderAnalysis cube take more time to complete when they are generated in the afternoon each day. You examine the server and observe that it is under significant memory pressure.Processing for all cubes must occur automatically in increments. You create one job to process the cubes and another job to process the dimensions. You must configure a processing task for each job that optimizes performance. As the cubes grown in size, the overnight processing of the cubes often do not complete during the allowed maintenance time window.Sales AnalysisThe SalesAnalysis cube is currently being tested before being used in production. Users report that day name attribute values are sorted alphabetically. Day name attribute values must be sorted chronologically. Users report that they are unable to query the cube while any cube processing operations are in progress. You need to maximize data availability during cube processing and ensure that you process both dimensions and measures.Order AnalysisThe OrderAnalysis cube is used for reporting and ad-hoc queries from Microsoft Excel. The data warehouse team adds a new table named Fact.Transaction to the cube. The Fact.Transaction table includes a column named Total Including Tax. You must add a new measure named Transactions ?Total Including Tax to the cube. The measure must be calculated as the sum of the Total Including Tax column across any selected relevant dimensions.FinanceThe Finance cube is used to analyze General Ledger entries for the company.Requirements- You must minimize the time that it takes to process cubes whilemeeting the following requirements:- The Sales cube requires overnight processing of dimensions, cubes,measure groups, and partitions.- The OrderAnalysis cube requires overnight processing of dimensionsonly.- The Finance cube requires overnight processing of dimensions only.
