Explanation: Confidentiality and integrity are two of the key facets of data security. Confidentiality ensures that sensitive information is not disclosed to unauthorized users; while integrity ensures that data is not altered by unauthorized users. These are Level 1 requirements. Confidentiality is enforced through encryption of data at rest, encryption of data in transit, and access control. Encryption of data in transit is accomplished by using secure protocols such as PSec, SSL, PPTP, SSH, and SCP, etc. Integrity can be enforced through hashing, digital signatures and CRC checks on the files. In the SRTM hierarchy, the enforcement methods would fall under the Level requirement.
