NEW QUESTION: 2You need to correct the VM issues. Which tools should you use? To answer, select the appropriate options in the answer area. NOTE: Each correct selection is worth one point. **Answer:** Explanation: Explanation Backup and Restore: Azure Backup Scenario: The VM is critical and has not been backed up in the past. The VM must enable a quick restore from a 7-day snapshot to include in-place restore of disks in case of failure. In-Place restore of disks in IaaS VMs is a feature of Azure Backup. Performance: Accelerated Networking Scenario: The VM shows high network latency, jitter, and high CPU utilization. Accelerated networking enables single root I/O virtualization (SR-IOV) to a VM, greatly improving its networking performance. This high-performance path bypasses the host from the datapath, reducing latency, jitter, and CPU utilization, for use with the most demanding network workloads on supported VM types.

NEW QUESTION: 3You administer a cloud service. You plan to host two web applications named contosoWeb and contosoWebSupport. You need to ensure that you can host both applications and qualify for the Azure Service Level Agreement. You want to achieve this goal while minimizing costs. How should you host both applications? **A.** in different web roles with two instances in each web role **B.** in the same web role with one instance **C.** in the same web role with two instances **D.** in different web roles with one instance in each web role **Answer: C** Explanation: A cloud service must have at least two instances of every role to qualify for the Azure Service Level Agreement, which guarantees external connectivity to your Internet-facing roles at least 99.95 percent of the time. NEW QUESTION: 4 **Answer:** Explanation: Explanation Box 1: COALESCE COALESCE evaluates the arguments in order and returns the current value of the first expression that initially does not evaluate to NULL. Box 2: T.UserID, p.UserID, -1- Return each task's owner if the task has an owner.- If a task has no owner, but is associated with a project that has an owner, return the project's owner.- Return the value -1 for all other cases. Box 3: LEFT JOIN The LEFT JOIN keyword returns all rows from the right table (table2), with the matching rows in the left table (table1). The result is NULL in the left side when there is no match. Here the right side could be NULL as the projectID of the task could be NULL. References:
