Which action must be taken at the production host prior to starting the recovery? **A.** Disable the Consistency Group **B.** Unmount the production volume(s) **C.** Create a bookmark **D.** Pause replication **Answer: B**

NEW QUESTION: 2 Your network contains a System Center 2012 Configuration Manager environment. You are creating a configuration item that contains application settings for Microsoft Office 2010. You need to detect whether Office 2010 is installed before validating the configuration item. What should you do? **A.** Create a direct membership collection. **B.** Enable Use a custom script to detect this application. **C.** Create an automatic deployment rule. **D.** Create a report to display all installed software. **Answer: B** **Explanation:** Provide Detection Method Information for the Configuration Item Use this procedure to provide detection method information for the configuration item. A detection method in Configuration Manager contains rules that are used to detect whether an application is installed on a computer. This detection occurs before the configuration item is assessed for compliance. To detect whether an application is installed, you can detect the presence of a Windows Installer file for the application, use a custom script, or select Always assume application is installed to assess the configuration item for compliance regardless of whether the application is installed.
