NEW QUESTION: 1Click to the Exhibit button.Referring to the exhibit, which router will become the BDR if all routers are powered on at the same time?**A. R4B. R3C. R2D. R1****Answer: B**

NEW QUESTION: 2A customer using HPE Synergy is unable to access certain VLANs from a single NIC port of a compute module.Which configuration option in the server profile needs to be verified to ensure that the server profile has the correct configuration?**A. VxLAN has not been enabledB. multiple VLAN checkbox is selectedC. assigned Network Set includes all needed VLANsD. multiple Networks are assigned to the connection****Answer: C**

NEW QUESTION: 3あなたはデータエンジニアです。

Hadoop分散ファイルシステム（HDFS）アーキテクチャを設計しています。Microsoft Azure Data Lakeをデータストレージリポジトリとして使用する予定です。

復元力のあるデータスキーマでリポジトリをプロビジョニングする必要があります。Azure Data Lake

Storageの復元力を確保する必要があります。何をすべきですか？回答するには、回答エリアで適切なオプションを選択します。注：それぞれの正しい選択には1ポイントの価値があります。

Answer: Explanation:ExplanationBox 1: NameNodeAn HDFS cluster consists of a single NameNode, a master server that manages the file system namespace and regulates access to files by clients.Box 2: DataNodeThe DataNodes are responsible for serving read and write requests from the file system's clients.Box 3: DataNodeThe DataNodes perform block creation, deletion, and replication upon instruction from the NameNode.Note: HDFS has a master/slave architecture. An HDFS cluster consists of a single NameNode, a master server that manages the file system namespace and regulates access to files by clients. In addition, there are a number of DataNodes, usually one per node in the cluster, which manage storage attached to the nodes that they run on. HDFS exposes a file system namespace and allows user data to be stored in files. Internally, a file is split into one or more blocks and these blocks are stored in a set of DataNodes. The NameNode executes file system namespace operations like opening, closing, and renaming files and directories. It also determines the mapping of blocks to DataNodes. The DataNodes are responsible for serving read and write requests from the file system's clients. The DataNodes also perform block creation, deletion, and replication upon instruction from the NameNode.References:
