NEW QUESTION: 2 Your network consists of one Active Directory forest named contoso.com. The functional level of the contoso.com forest is Windows Server 2008. The network contains seven servers that run Internet Information Services (IIS) 7.0 and host Web services. Remote users from a partner company access the Web services through HTTPS. The partner company has a separate Active Directory forest named fabrikam.com. The functional level of the fabrikam.com forest is Windows Server 2003. You need to recommend an authentication solution for the fabrikam.com users. The solution must meet the following requirements: -All communications between both forests must use only HTTPS. -Remote users must only authenticate once to access all Web services. -Users from fabrikam.com must access the Web

services by using user accounts in the fabrikam.com forest. What should you recommend? **A.** Implement Microsoft Identity Lifecycle Manager (ILM) 2007 on the contoso.com forest. **B.** Implement Client Certificate Mapping Authentication on the IIS servers. **C.** Implement Active Directory Federation Services (AD FS) in the contoso.com forest. Create a federation trust between the contoso.com forest and the fabrikam.com forest. **D.** Implement a forest trust between the contoso.com and the fabrikam.com forests. Configure the forest trust to use Selective Authentication. **Answer: C**

Explanation: Explanation You can use Active Directory Federation Services (ADFS) to enable efficient and secure online transactions between Partner organizations that are joined by federation trust relationships. You can establish federation trust relationships between two partner organizations when both of the organizations deploy at least one ADFS federation server and they configure their Federation Service settings appropriately. In this case, you need to configure Active Directory Federation Services (AD FS) in the Contoso.com forest so that the users of TechMasters.com can access web services from the network of Contoso.com. You can then configure a federation trust between the Contoso.com and the Fabrikam.com forests so that the authentication can be performed by using user accounts in the Fabrikam.com for the remote users of the company to access all Web services on Contoso.com. NEW QUESTION: 3 A user has created a VPC with public and private subnets. The VPC has CIDR 20.0.0.0/16. The private subnet uses CIDR 20.0.1.0/24 and the public subnet uses CIDR 20.0.0.0/24. The user is planning to host a web server in the public subnet (port 80) and a DB server in the private subnet (port 3306). The user is configuring a security group of the NAT instance. Which of the below mentioned entries is not required for the NAT security group? **A.** For Inbound allow Source: 20.0.0.0/24 on port 80 **B.** For Outbound allow Destination: 0.0.0.0/0 on port 443 **C.** For Outbound allow Destination: 0.0.0.0/0 on port 80 **D.** For Inbound allow Source: 20.0.1.0/24 on port 80 **Answer: A**

Explanation: A user can create a subnet with VPC and launch instances inside that subnet. If the user has created a public private subnet to host the web server and DB server respectively, the user should configure that the instances in the private subnet can connect to the internet using the NAT instances. The user should first configure that NAT can receive traffic on ports 80 and 443 from the private subnet. Thus, allow ports 80 and 443 in Inbound for the private subnet 20.0.1.0/24. Now to route this traffic to the internet configure ports 80 and 443 in Outbound with destination 0.0.0.0/0. The NAT should not have an entry for the public subnet CIDR.

NEW QUESTION: 4 What information in addition to the vendor must be the same to create a collective invoice for multiple purchase orders? **A.** Incoterms and currency **B.** Incoterms and product category **C.** Product category and company code **D.** Currency and company code **Answer: D**
