Are you fed up with the dull knowledge, So the shopping for 300-430 Implementing Cisco Enterprise Wireless Networks exam training material is very safety, Also if you work on other thing and have interest in computer, you can also realize your achievement first.

Our printable 300-430 real exam dumps, online engine and windows software are popular among candidates.

**NEW QUESTION: 1** Which three options are the building blocks of Cisco ACI? (Choose three.)  
**A.** control-plane isolation  
**B.** automation  
**C.** imperative configuration model  
**D.** a RESTful GUI interface for optimal configuration  
**E.** centralized management  
**F.** fabric policy  
**Answer: B,E,F**  
Explanation: Topic 3, Positioning Application Centric Infrastructure Value Proposition

**NEW QUESTION: 2** ALE can provide information about which type of connections? (Select two.)  
**A.** only clients that run the Beacons App.  
**B.** associated clients  
**C.** unassociated clients  
**D.** only clients that run the Venue App  
**Answer: B,C**  
Explanation: Explanation/Reference: Reference: [http://www.arubanetworks.com/assets/ds/DS\\_ALE.pdf](http://www.arubanetworks.com/assets/ds/DS_ALE.pdf)

### NEW QUESTION: 3

脆弱性スキャナーの報告によると、クレジットカードの企業環境で動作しているクライアント/サーバー型ホスト監視ソリューションは、企業ポリシーを満たさない弱いアルゴリズムでSSLセッションを管理しています。次のうちどれが本当の声明ですか？（2を選択）  
**A.** クライアントとサーバー間のハンドシェイクが間違った優先順位で設定されています。  
**B.** クライアント - サーバー間のハンドシェイクはTLS認証に基づいています。  
**C.** X509 V3証明書は信頼されていない公開CAによって発行されました。  
**D.** X509 V3証明書は期限切れです。  
**E.** クライアント/サーバー間のハンドシェイクは強力な暗号をネゴシエートできませんでした。  
**F.** クライアントサーバーは、異なる証明書を使用してクライアントサーバー相互認証を実装します。  
**Answer: A,E**  
Explanation: The client-server handshake could not negotiate strong ciphers. This means that the system is not configured to support the strong ciphers provided by later versions of the SSL protocol. For example, if the system is configured to support only SSL version 1.1, then only a weak cipher will be supported. The client-server handshake is configured with a wrong priority. The client sends a list of SSL versions it supports and priority should be given to the highest version it supports. For example, if the client supports SSL versions 1.1, 2 and 3, then the server should use version 3. If the priority is not configured correctly (if it uses the lowest version) then version 1.1 with its weak algorithm will be used.  
Incorrect Answers:  
A: If the X509 V3 certificate was issued by a non-trusted public CA, then the client would receive an error saying the certificate is not trusted. However, an X509 V3 certificate would not cause a weak algorithm.  
D: TLS provides the strongest algorithm; even stronger than SSL version 3.  
E: If the X509 V3 certificate had expired, then the client would receive an error saying the certificate is not trusted due to being expired. However, an X509 V3 certificate would not cause a weak algorithm.  
F: SSL does not mutual authentication with different certificates.
