NEW QUESTION: 1A perpetual inventory system uses a minimum quantity on hand to initiate purchaseordering procedures for restocking. In reviewing the appropriateness of the minimum quantity level established by the stores department, the internal auditor is least likely to consider**A. Optimal order sizes determined by the economic order quantities model.B. Available storage space and potential obsolescence.C. Stockout costs, including lost customers.D. Seasonal variations in forecasting inventory demand.****Answer: A****Explanation:**The basic economic order quantity (EOQ) model is based on the following variables: demand, variable cost per purchase order, and variable unit carrying cost. Thus, minimum stocking levels do not affect the EOQ.

NEW QUESTION: 2The chief Risk officer is concerned about the new employee BYOD device policy and has requested the security department implement mobile security controls to protect corporate data in the event that a device is lost or stolen.The level of protection must not be compromised even if the communication SIM is removed from the device. Which of the following BEST meets the requirements? (Select TWO)**A. Asset trackingB. Screen-locksC. GEO-TrackingD. Device encryption****Answer: A,D****Explanation:**A. Asset tracking is the process of maintaining oversight over inventory, and ensuring that a device is still in the possession of the assigned authorized user.D. Device encryption encrypts the data on the device. This feature ensures that the data on the device cannot be accessed in a useable form should the device be stolen.**Incorrect Answers:**B. Screen-lock is a security feature that requires the user to enter a password after a short period of inactivity before they can access the system again. This feature ensures that if your device is left unattended or is lost or stolen, it will be difficult for anyone else to access your data or applications.C. GEO tracking and GPS tracking can be used to identify its location of a stolen device and can allow authorities to recover the device. However, for GPS tracking to work, the device must have an Internet connection or a wireless phone service over which to send its location information.**References:**Dulaney, Emmett and Chuck Eastton, CompTIA Security+ Study Guide, 6th Edition, Sybex, Indianapolis, 2014, pp. 418-419 Stewart, James Michael, CompTIA Security+ Review Guide, Sybex, Indianapolis, 2014, pp. 236, 237, 238

NEW QUESTION: 3Scenario: An engineer has configured a virtual server that users access using HTTP port 80. The web application also uses TCP port 81 and 8080 for non-user access. The engineer would like to prevent users from connecting to web servers if any of the ports go down.How should the engineer set this configuration to ensure service availability?**A. Lower the server timeout value.B. Create additional virtual servers for ports 81 and 8080.C. Create monitors for ports 81 and 8080, and bind to the service or service group.D. Increase the monitor threshold.****Answer: C**
