NEW QUESTION: 3A. quality plan.B. risk register.C. project management plan.D. process diagram.Answer: A

NEW QUESTION: 4次のうちIKEモードはどれですか？（すべて選択して適用）**A. Diffie-Hellman ModeB. Aggressive ModeC. Fast ModeD. Quick ModeE. Main ModeAnswer: B,D,E**Explanation: Explanation

<https://supportforums.cisco.com/t5/security-documents/main-mode-vs-aggressive-mode/ta-p/3123382>Main Mode - An IKE session begins with the initiator sending a proposal or proposals to the responder. The proposals define what encryption and authentication protocols are acceptable, how long keys should remain active, and whether perfect forward secrecy should be enforced, for example. Multiple proposals can be sent in one offering. The first exchange between nodes establishes the basic security policy; the initiator proposes the encryption and authentication algorithms it is willing to use. The responder chooses the appropriate proposal (we'll assume a proposal is chosen) and sends it to the initiator. The next exchange passes Diffie-Hellman public keys and other data. All further negotiation is encrypted within the IKE SA. The third exchange authenticates the ISAKMP session. Once the IKE SA is established, IPsec negotiation (Quick Mode) begins. Aggressive Mode - Aggressive Mode squeezes the IKE SA negotiation into three packets, with all data required for the SA passed by the initiator. The responder sends the proposal, key material and ID, and authenticates the session in the next packet. The initiator replies by authenticating the session. Negotiation is quicker, and the

initiator and responder ID pass in the clear. Quick Mode - IPSec negotiation, or Quick Mode, is similar to an Aggressive Mode IKE negotiation, except negotiation must be protected within an IKE SA. Quick Mode negotiates the SA for the data encryption and manages the key exchange for that IPSec SA.
