**NEW QUESTION: 1**HOTSPOTYour network contains one Active Directory domain named contoso.com. The domain contains 10 file servers that run Windows Server 2012 R2.You plan to enable BitLocker Drive Encryption (BitLocker) for the operating system drives of the file servers. You need to configure BitLocker policies for the file servers to meet the following requirements: Ensure that all of the servers use a startup PIN for operating system drives encrypted with BitLocker.Ensure that the BitLocker recovery key and recovery password are stored in Active Directory.Which two Group Policy settings should you configure? To answer, select the appropriate settings in the answer area.**Answer:** Explanation:Choose how BitLocker-protected operating system drives can be recovered: With this policy setting, you can control how BitLocker-protected operating system drives are recovered in the absence of the required startup key information. In Save BitLocker recovery information to Active Directory Domain Services, choose which BitLocker recovery information to store in Active Directory Domain Services (AD DS) for operating system drives. If you select Store recovery password and key packages, the BitLocker recovery password and the key package are stored in AD DS. Storing the key package supports recovering data from a drive that is physically corrupted. If you select Store recovery password only, only the recovery password is stored in AD DS.Require additional authentication at startup: With this policy setting, you can configure whether BitLocker requires additional authentication each time the computer starts and whether you are using BitLocker with a Trusted Platform Module (TPM). This policy setting is applied when you turn on BitLocker. On a computer with a compatible TPM, four types of authentication methods can be used at startup to provide added protection for encrypted data. When the computer starts, it can use:-only the TPM for authentication-insertion of a USB flash drive containing the startup key-the entry of a 4-digit to 20-digit personal identification number (PIN)-a combination of the PIN and the USB flash driveThere are four options for TPM-enabled computers or devices: Configure TPM startupo Allow TPMo Require TPMo Do not allow TPMConfigure TPM startup PIN

o Allow startup PIN with TPM o Require startup PIN with TPM o Do not allow startup PIN with TPM  
Configure TPM startup key o Allow startup key with TPM o Require startup key with TPM o Do not allow startup key with TPM  
Configure TPM startup key and PIN o Allow TPM startup key with PIN o Require startup key and PIN with TPM o Do not allow TPM startup key with PIN

**NEW QUESTION: 2** You have an on-premises Hyper-V cluster. The cluster contains Hyper-V hosts that run Windows Server 2016 Datacenter. The hosts are licensed under a Microsoft Enterprise agreement that has Software Assurance. The Hyper-V cluster contains 30 virtual machines that run Windows Server 2012 R2. Each virtual machine runs a different workload. The workloads have predictable consumption patterns. You plan to replace the virtual machines with Azure virtual machines that run Windows Server 2016. The virtual machines will be sized according to the consumption pattern of each workload. You need to recommend a solution to minimize the compute costs of the Azure virtual machines. Which two recommendations should include in the solution? Each correct answer presents part of the solution. NOTE: Each correct selection is worth one point.  
**A.** Create a lab in Azure DevTest Labs and place the Azure virtual machines in the lab.
