NEW QUESTION: 3 Refer to the exhibit. If a port is configured as shown and receives an

untagged frame, of which VLAN will the untagged frame be a member?**A. VLAN 2B. VLAN 1C. VLAN 4D. VLAN 3****Answer: A****Explanation:**When typing: Switch(config-if)#switchport mode ? access Set trunking mode to ACCESS unconditionally dynamic Set trunking mode to dynamically negotiate access or trunk mode trunk Set trunking mode to TRUNK unconditionally and Switch(config-if)#switchport mode dynamic ? auto Set trunking mode dynamic negotiation parameter to AUTOdesirable Set trunking mode dynamic negotiation parameter to DESIRABLESo if we configure Fa0/1 as dynamic auto mode, it will not initiate any negotiation but waiting forthe other end negotiate to be a trunk with DTP. If the other end does not ask it to become a trunkthen it will become an access port. Therefore when using the "show interface fastEthernet0/1switchport" command we will see two output lines "Administrative ModE. dynamic auto" and "Operational ModE. static access"NotE. To set this port to VLAN 2 as the output above just use one additional command."switchport access vlan 2. Now back to our question, from the output we see that Fa0/1 is operating as an access port on VLAN 2 so if it receive untagged frame it will suppose that frame is coming from VLAN 2.
