NEW QUESTION: 1 Sie haben eine SQL Server 2016-Datenbank mit dem Namen DB1. Sie planen, eine große Anzahl von Datensätzen aus einer SQL Azure-Datenbank in DB1 zu importieren. Sie müssen eine Lösung empfehlen, um den im Transaktionsprotokoll während des Importvorgangs belegten Speicherplatz zu minimieren. Was sollten Sie in die Empfehlung aufnehmen?
A. Eine neue partitionierte Tabelle
B. Eine neue Dateigruppe
C. Das massenprotokollierte Wiederherstellungsmodell
D. Eine neue Protokolldatei
E. Das vollständige Wiederherstellungsmodell
Answer: C
Explanation: Compared to the full recovery model, which fully logs all transactions, the bulk-logged recovery model minimally logs bulk operations, although fully logging other transactions. The bulk-logged recovery model protects against media failure and, for bulk operations, provides the best performance and least log space usage. Note: The bulk-logged recovery model is a special-purpose recovery model that should be used only intermittently to improve the performance of certain large-scale bulk operations, such as bulk imports of large amounts of data. The environment includes the following servers: SRV1 and SRV2. SRV1 has 16 logical cores and hosts a SQL Server instance that supports a mission-critical application. The application has approximately 30,000 concurrent users and relies heavily on the use of temporary tables. The environment also includes the following databases: DB1, DB2, and Reporting. The Reporting database is protected with Transparent Data Encryption (TDE). You plan to migrate this database to a new server. You detach the database and copy it to the new server. You are performing tuning on a SQL Server database instance. The application which uses the database was written using an object relationship mapping (ORM) tool which maps tables as objects within the application code. There are 30 stored procedures that are regularly used by the application. Exhibit
