Meanwhile, if you also need to take other related exams you also can choose another exam instead of the failed exam, NSE5_FSM-6.3 exam questions are selected by our professional expert team, **NSE5_FSM-6.3 Latest Test Testking** and designed to broaden your technology and ensure you pass the exam with 100% passing rate.

NEW QUESTION: 1A network engineer deployed a switch that operates the LAN base feature set and decides to use the SDM VLAN template. The SDM template is causing the CPU of the switch to spike during peak working hours. What is the root cause of this issue?**A.** The SDM VLAN template causes the MAC address-table to overflow.**B.** The VLAN receives additional frames from neighboring switches.**C.** The switch needs to be rebooted before the SDM template takes effect.**D.** The VLAN template disables routing in hardware.**Answer: D**
Explanation:SDM Template Notes:All templates are predefined. There is no way to edit template category individual values.The switch reload is required to use a new SDM template.The ACL merge algorithm, as opposed to the original access control entries (ACEs) configured by the user, generate the number of TCAM entries listed for security and QoS ACEs.The first eight lines (up to Security ACEs) represent approximate hardware boundaries set when a template is used. If the boundary is exceeded, all processing overflow is sent to the CPU which can have a major impact on the performance of the switch. Choosing the VLAN template will actually disable routing (number of entry for unicast or multicast route is zero) in hardware.

NEW QUESTION: 2An architect is designing a new virtualized POWER7 system. The system will have a number of AIX and Linux LPARs and will be deployed with a logical memory block size of 16MB.Which of the following could be used to determine the amount of memory used by the Hypervisor?**A.** Facts and Features Guide.**B.** System Planning Tool.**C.** LPAR Validation Tool.**D.** System Configurator.**Answer: B**

NEW QUESTION: 3Your network contains four servers that run Windows Server 2008 R2. The servers are configured as shown in the following table:Server2 and Server3 are configured as RemoteApp sources on Server4.You need to ensure that the RemoteApp programs are listed on the RD Web Access Web page on Server1.What should you do?**A.** On Server4, add Server1 to the TS Web Access Computers group.**B.** On Server1, add Server4 to the TS Web Access Administrators group.**C.** On Server4, add Server1 to the Session Broker Computers group.**D.** On Server1, add Server2 and Server3 to the TS Web Access Administrators group.**Answer: A**
