NEW QUESTION: 2 Which statement about the Cisco Secure ACS Solution Engine TACACS+ AV pair is true?
A. AV pairs are only string values.
B. AV pairs are only required to be enabled on Cisco Secure ACS for successful implementation.
C. AV pairs are of two types: string and integer.
D. The Cisco Secure ACS Solution Engine does not support accounting AV pairs.
Answer: A
Explanation: All TACACS+ values are strings. The concept of value type does not exist in TACACS+ as it does in Remote Access Dial-In User Service (RADIUS)

NEW QUESTION: 3 Which two statements are true about Oracle Managed Files (OMF)? (Choose two.)
A. OMF can be used with ASM disk groups, as well as with raw devices, for better file management.
B. OMF automatically creates unique file names for table spaces and control files.
C. The file system directions that are specified by OMF parameters are created automatically.
D. OMF may affect the location of the redo log files and archived log files.
E. OMF cannot be used in a database that already has data files created with user-specified directions.
Answer: B, D
Explanation: Reference: D: The database internally uses standard file

system interfaces to create and delete files as needed for the following database structures:
Tablespaces
Redo log files
Control files
Archived logs
Block change tracking files
Flashback logs
RMAN backups
Note:* Using Oracle-managed files simplifies the administration of an Oracle Database. Oracle-managed files eliminate the need for you, the DBA, to directly manage the operating system files that make up an Oracle Database. With Oracle-managed files, you specify file system directories in which the database automatically creates, names, and manages files at the database object level. For example, you need only specify that you want to create a tablespace; you do not need to specify the name and path of the tablespace's datafile with the DATAFILE clause.
