NEW QUESTION: 1You create an Azure web app named WebApp1. WebApp1 has the autoscale settings shown in the following exhibit. The scale out and scale in rules are configured to have a duration of 10 minutes and a cool down time of five minutes. Use the drop-down menus to select the answer choice that completes each statement based on the information presented in the graphic. NOTE: Each correct selection is worth one point. **Answer:** Explanation: Explanation Box 1: one instance Refer to scaling condition provided in the question, August 8, 2018 is outside the schedule of the scale condition 1, and Default instance count is 1. Box 2: two instances The default instance count is important because autoscale scales your service to that count when metrics are not available. Therefore, select a default instance count that's safe for your workloads. The Default instance count of scale condition 1 is 4, and the Scale in rule decreases the count with 1. So initial instance count before scale in condition met = 4 CPU utilization was at 15% for 60 mins so after first 10 mins (The scale out and scale in rules are configured to have a duration of 10 minutes) instance count reduces by 1 hence after first 10 mins instance count is 4-1=3 Now cool down period is 5 mins , after first 15 mins instance count is 3 .After next 15 mins , instance count will be 3-1=2. After next 15 mins , instance count will be =2 because minimum instance count must be 2 , it can't get reduced beyond 2. So after 60 mins instance count will be at 2. for unauthorized changes to the system
C. A HIDS can notify system administrators when unusual events are identified
D. A HIDS does not consume large amounts of system resources
Answer: D
Explanation: Explanation/Reference: A HIDS does not consume large amounts of system resources is the correct choice. HIDS can consume inordinate amounts of CPU and system resources in order to function effectively, especially during an event. All the other answers are characteristics of HIDSes
A HIDS can: scrutinize event logs, critical system files, and other auditable system resources; look for unauthorized change or suspicious patterns of behavior or activity can send alerts when unusual events are discovered
