NEW QUESTION: 1As a best practice, the FTE field must be visible to the HR department and to managers. They should not be able to edit this field. How would you configure the FTE field in the system? There are 2 correct answers to this question. Choose:**A.** In the Succession Data Model XML, set the FTE field visibility to "view".**B.** In role-based permissions, grant the HR role and Manager role the "View Current" and "View History" permission for the job information actions.**C.** In the Succession Data Model XML, set the FTE field visibility to "none".**D.** In role-based permissions, grant the HR role and Manager role the "view Current" and "view History" permission for the FTE field.**Answer: A,D**

NEW QUESTION: 2The current depth of the SYSTEM.CLUSTER.TRANSMIT.QUEUE has not dropped below a certain number for several hours. Which of the following can be used to determine the channel(s) for which these messages are destined?**A.** A DISPLAY QSTATUS command for SYSTEM.CLUSTER.TRANSMIT.QUEUE with the UNCOM parameter.**B.** A DISPLAY QSTATUS command with the QMURID parameter.**C.** A DISPLAY CHSTATUS command where BATCHES is equal to zero.**D.** A DISPLAY CHSTATUS command where XQMSGSA is greater than zero.**Answer: D**

NEW QUESTION: 3Drag and drop characteristics of PIM dense mode from the left to the right.**Answer:** Explanation: Explanation PIM-DM supports only source trees - that is, (S,G) entries - and cannot be used to build a shared distribution tree. Reference: https://www.cisco.com/c/en/us/td/docs/ios-xml/ios/ipmulti_pim/configuration/xe-16-5/imc-pim-xe-16-5-book/im PIM dense mode (PIM-DM) uses a push model to flood multicast traffic to every corner of the network. This push model is a brute-force method of delivering data to the receivers. This method would be efficient in certain deployments in which there are active receivers on every subnet in the network. PIM-DM initially floods multicast traffic throughout the network. Routers that have no downstream neighbors prune the unwanted traffic. This process repeats every 3 minutes. A rendezvous point (RP) is required only in networks running Protocol Independent Multicast sparse mode (PIM-SM). In PIM dense mode (PIM-DM), multicast traffic is initially flooded to all segments of the network. Routers that have no downstream neighbors or directly connected receivers prune back the unwanted traffic.

NEW QUESTION: 4HOTSPOT Match the components with their role in preventing threats. Answer options may be used more than once or not at all.**Answer:** Explanation:
