Bag all certifications that build your career, Free of virus for our NS0-701 premium VCE file, After using the NS0-701 test guide, you will have the almost 100% assurance to take part in an examination.

NEW QUESTION: 1An insurance company wants to increase sales by 15% and customer retention by 10% within 1 calendar year. Various strategies to achieve this were considered and a restructure to the existing pricing model is selected to help achieve these goals. A business analyst (BA) works with stakeholders such as actuaries, product specialists, sales staff, risk managers, and underwriters who agree to applying varying levels of discounts to customers based on: *Total annual premium the customer has with the company (Financial worth) *Time with the insurance company (Loyalty) Various financial models are considered but the stakeholders agree that an initial applicable discount is determined based on the customer's overall premium: The percentage of the maximum possible discount available to the customer is adjusted based on time with the company: If within the first six months, customer retention increased by 5% and sales increased by 6%, then when will the desired sales and retention goals be achieved assuming the trend continues at the same pace? **A.** Sales - 18 months; Retention - 1 year **B.** Sales - 3 years; Retention - 1 year **C.** Sales - 2.5 years; Retention - 2 years **D.** Sales - 2 years; Retention - 18 months **Answer: A**

NEW QUESTION: 2 Cisco ISE が作成する 2 つのデフォルトエンドポイント ID グループはどれですか。(2 つ選択してください) **A.** 許可リスト **B.** エンドポイント **C.** 不明 **D.** プロファイル **E.** ブロックリスト **Answer: C, D** Explanation: Explanation https://www.cisco.com/c/en/us/td/docs/security/ise/2-1/admin_guide/b_ise_admin_guide_21/b_ise_admin_guide Default Endpoint Identity Groups Created for Endpoints Cisco ISE creates the following five endpoint identity groups by default: Blacklist, GuestEndpoints, Profiled, RegisteredDevices, and Unknown. In addition, it creates two more identity groups, such as Cisco-IP-Phone and Workstation, which are associated to the Profiled (parent) identity group. A parent group is the default identity group that exists in the system. Cisco ISE creates the following endpoint identity groups: * Blacklist-This endpoint identity group includes endpoints that are statically assigned to this group in Cisco ISE and endpoints that are block listed in the device registration portal. An authorization profile can be defined in Cisco ISE to permit, or deny network access to endpoints in this group. * GuestEndpoints-This endpoint identity group includes endpoints that are used by guest users. * Profiled-This endpoint identity group includes endpoints that match endpoint profiling policies except Cisco IP phones and workstations in Cisco ISE. * RegisteredDevices-This endpoint identity group includes endpoints, which are registered devices that are added by an employee through the devices registration portal. The profiling service continues to profile these devices normally when they are assigned

to this group. Endpoints are statically assigned to this group in Cisco ISE, and the profiling service cannot reassign them to any other identity group. These devices will appear like any other endpoint in the endpoints list. You can edit, delete, and block these devices that you added through the device registration portal from the endpoints list in the Endpoints page in Cisco ISE. Devices that you have blocked in the device registration portal are assigned to the Blacklist endpoint identity group, and an authorization profile that exists in Cisco ISE* redirects blocked devices to a URL, which displays "Unauthorised Network Access", a default portal page to the blocked devices.* Unknown-This endpoint identity group includes endpoints that do not match any profile in Cisco ISE. In addition to the above system created endpoint identity groups, Cisco ISE creates the following endpoint identity groups, which are associated to the Profiled identity group:* Cisco-IP-Phone-An identity group that contains all the profiled Cisco IP phones on your network.* Workstation-An identity group that contains all the profiled workstations on your network.

NEW QUESTION: 3 In the context of Perl user-defined subroutines, which statement is the most accurate?**A.** Variables declared using the my keyword are global in scope.**B.** Variables declared using the local keyword are only available to the subroutine from which they are declared.**C.** Variable declared using the local keyword are available to subsequently called subroutines.**D.** Variables declared using the my keyword are available to the calling subroutine.**Answer: C**
